Arithmetic Teacher ,1993 **Maple and Mathematica** Inna K. Shingareva,Carlos Lizárraga-Celaya,2010-04-29 In the history of mathematics there are many situations in which calculations were performed incorrectly for important practical applications Let us look at some examples the history of computing the number began in Egypt and Babylon about 2000 years BC since then many mathematicians have calculated e g Archimedes Ptolemy Vi ete etc The first formula for computing decimal digits of π was discovered by J Machin in 1706 who was the first to correctly compute 100 digits of π Then many people used his method e g W Shanks calculated with 707 digits within 15 years although due to mistakes only the first 527 were correct For the next examples we can mention the history of computing the ne structure constant that was first discovered by A Sommerfeld and the mathematical tables exact lutions and formulas published in many mathematical textbooks were not verified rigorously 25 These errors could have a large effect on results obtained by engineers But sometimes the solution of such problems required such technology that was not available at that time In modern mathematics there exist computers that can perform various mathematical operations for which humans are incapable Therefore the computers can be used to verify the results obtained by humans to discovery new results to provetheresultsthat a human can obtain without any technology With respect to our example of computing we can mention that recently in 2002 Y Kanada Y Ushiro H Kuroda and M Glencoe Mathematics ,2001 **Active Learning in the Mathematics Classroom, Grades 5-8** Hope Martin,2007-03-02 Deepen students understanding of math concepts through active involvement Engaging students directly in creative learning experiences is the basis of author Hope Martin s approach for re energizing mathematics instruction Active Learning in the Mathematics Classroom Grades 5 8 Second Edition offers attention grabbers such as Algebra Jokes The M M Mystery How Long Would It Take to Walk to China and Gummi Worms to help students use mathematics as a powerful problem solving tool gain meaningful understandings of key concepts and effectively communicate their mathematical thinking Presenting a generous collection of student activities aligned with the five NCTM content standards this revised edition of Multiple Intelligences in the Mathematics Classroom features A new chapter addressing algebra concepts Reproducible student pages for each activity Journaling questions to engage students in writing about mathematics Specific Web site resources With step by step directions suggestions tips and variations for implementation this updated text provides a rich instructional resource for teachers mathematics specialists and curriculum directors **Scott Foresman-Addison Wesley Middle School Math** ,2002 **New York Math: Math B** ,2000 *Math Wise!
