Broadcasting ,1942 **The Truth About Statins** Barbara H. Roberts,2012-04-24 Discusses the uses misuses dangers and benefits of statin drugs counseling patients on how to make informed choices about side effects and lifestyle changes that can promote cardiovascular health *Triumph of the Heart* Jie Jack Li,2009-04-03 Prologue 1 Cholesterol 2 Genesis of Statins 3 Merck's Triumph 4 Discovery of Lipitor 5 Development of Lipitor 6 To Market To Market 7 Baycol Crestor and Drugs beyond Statins 8 Reflections Appendix Trademarks of the Drugs Bibliography and Notes Index The Effect of Clinical Trial Regulation Changes on Statin Therapy for Cardiovascular Disease in Randomized Controlled Trials Savannah Grace Browning,2020 Cardiovascular disease continues to be of concern in many developed countries especially in the United States where 1 out of 4 deaths is due to heart disease High blood cholesterol levels are thought to be one of the major risk factors for heart disease therefore statin therapy alone or in combination with lifestyle changes is one of the most common preventions and treatments for heart disease From 2011 2012 approximately 28% of adults in the U S 40 reported taking a cholesterol lowering drug in the past 30 days of those 28% 93% report taking a statin The believed effectiveness of statins stems from the multitude of clinical trials and meta analyses reporting statins were effective in decreasing the incidence of cardiac events Clinical trial regulations have been modified substantively from time to time with one of the largest set of changes being put into place in 2004 The changes put into place in 2004 require 1 clinical trials to be registered with a clinical trial registry 2 registry to be kept up to date with all trial design changes 3 all data and results must be published as it is available Based on a set of visual evaluations a recent comprehensive evaluation concluded that the statin clinical trials occurring after this large scale change in regulations reporting that statins are not efficacious as originally believed and are likely dangerous In this thesis de novo meta analyses were performed evaluating the efficacy of statin therapy on the reduction in the incidence of primary cardiac outcomes cardio related mortality and all cause mortality We posited that the 2004 regulations had an impact on reports of efficacy and thus subgroup analyses were performed distinguishing the studies that occurred prior to the major clinical trial regulation changes in 2004 pre 2004 and those that occurred after post 2004 Studies fitting the inclusion and exclusion criteria were identified pertinent data were extracted and data analyses were performed using the inverse variance heterogeneity model In the total combined pooled analysis studies showed results consistent with many other meta analyses that statin therapy was effective in reducing primary cardiac event incidence However among the subgroup of studies occurring after the 2004 changes efficacy of statin therapy in reducing primary cardiac event incidence did not meet statistical significance A similar pattern was seen in the analysis for cardio related mortality and all cause mortality We conclude that the clinical trial regulation changes that went into place in 2004

appeared to have an effect the published outcomes of clinical trials of statins The clinical trial regulation changes altered the apparent efficacy of statin therapy regarding a decrease Among trials conducted after the regulations there was not a statistically significant reduction in the incidence of primary cardiac outcomes cardio related death and all cause mortality This information shows that it will be important to continue to critically evaluate all new clinical trials as well as the meta analyses that include a large portion of pre 2004 studies **Statins in General Practice: Pocketbook** Allan

Gaw,2003-03-27 No member of the primary care team can afford to be indifferent to the tremendous developments that have taken place in the areas of coronary heart disease and vascular disease prevention This new edition of Statins in General Practice includes data from the major new clinical trials This short book contains everything that the general practitioner

Statins Allan Gaw, MD, PhD,Christopher J Packard, MRCPATH, DSc,James Shepherd, MB, ChB, PhD, FRCPath, FRCP(Glasg),1999-10-29 A comprehensive compendium of the clinical trial data available with each statin s different qualities explained this text is intended as a guide to hypercholesterolaemia for both experienced clinicians and trainees

Focus on Statin Research B. A. Wong,2006 The statins are a relatively new group of drugs used to lower blood cholesterol levels A high cholesterol level increases a person s risk of having a heart attack or stroke The long term use of statins reduces the risk of such an event and can increase the life expectancy of people with a history of heart disease The statins work by blocking an enzyme in the body that is involved in the production of LDL cholesterol especially in the liver This enzyme is known as HMG coenzyme A reductase The statins are the most effective group of drugs for lowering the levels of LDL cholesterol in the body Potential side effects include muscle cramps and gastrointestinal upsets These are usually resolved on temporarily lowering the dose Liver enzyme derangements may occur which generally return to normal after briefly discontinuing the drug Some report headaches Other side effects occur rarely This new book examines new research on this controversial drug Statin Drugs Duane Graveline,2004 *Statin Nation* Justin Smith,2017 Heart disease is the leading cause of death worldwide and for decades conventional health authorities have pushed that the culprits are fat and cholesterol clogging up coronary arteries Consequently lowering cholesterol has become a hugely lucrative business and cholesterol lowering Statin drugs are now the most prescribed medication in the world with clinical data showing one billion people eligible for prescription However these cholesterol guidelines have been heavily criticized and increasingly doctors and researchers have been questioning the role cholesterol plays in heart disease We now know that people with heart disease often do not in fact have high cholesterol and even the strongest supporters of the cholesterol hypothesis now admit that no ideal level of cholesterol can be identified Large scale studies have proven that statins are not generating the benefits that were predicted and new research shows that high cholesterol may actually prevent heart disease Worse still millions of people in the United States and worldwide are taking statins preventatively at great cost to their health A complete reevaluation of the real causes of heart disease is long overdue not to mention an inquiry into why the

pharmaceutical industry continues to overprescribe statins and market them aggressively to consumers despite this evidence Statin Nation offers a new understanding of heart disease and Justin Smith forges an innovative path away from the outdated cholesterol myth with a viable alternative model to address the real causes of heart disease Statin Nation provides detailed examinations of nutritional alternatives that are up to six times more effective than statins and other interventions that have been shown to be up to eleven times more effective than statins But all of these methods are currently ignored by health authorities Smith provides a heart disease prevention plan that anyone can use providing hope for the future of heart disease treatment with a purpose

Drug Class Review ,2009 In the United States coronary heart disease and cardiovascular disease account for nearly 40% of all deaths each year Coronary heart disease continues to be the leading cause of mortality and a significant cause of morbidity among North Americans In 2006 coronary heart disease claimed 607 000 lives translating into about 1 out of every 5 deaths in the United States High levels of cholesterol or hypercholesterolemia are an important risk factor for coronary heart disease The 3 hydroxy 3 methylglutaryl coenzyme HMG CoA reductase inhibitors also known as statins are the most effective class of drugs for lowering serum low density lipoprotein cholesterol concentrations They are first line agents for patients who require drug therapy to reduce serum low density lipoprotein cholesterol concentrations The purpose of this review is to compare the benefits and harms of different statins in adults and children with hypercholesterolemia

Statins Bernadetta La Grua,Alessandro Molinelli,2012 Statins work by reducing cholesterol synthesis by inhibiting the enzyme HMG CoA reductase The decrease in cholesterol levels is associated with increased expression of receptors of hepatocytes with a greater extraction of plasma LDL C and a lower diffusion of it into the tissues In this book the authors present current research in the study of the pharmacology clinical implications and adverse effects of statins Topics include the pleiotropic effects of statins beyond cholesterol lowering anti inflammatory activity of statins in asthma and COPD statins as anticancer agents statin use in patients with carotid disease and the Alzheimer s disease risk lowering effect of lipophilic statins

The Merck Report ,1904 *Advances in Statin Therapy & Beyond in CVD (ASTC)* HK Chopra,Navin C Nanda,Jagat Narula,2022-03-30 CVD or cardiovascular disease is a general term that describes a disease of the heart or blood vessels It is one of the most common causes of death Statins are a group of medicines that can help lower the level of low density lipoprotein LDL cholesterol in the blood LDL cholesterol of often referred to as bad cholesterol and statins reduce its production in the liver Having a high level of LDL is potentially dangerous as it can lead to hardening and narrowing of the arteries NHS Comprising nearly 1000 pages this book is a comprehensive guide to the latest advances in statin therapy and its clinical application for cardiovascular disease Divided into 29 sections the text begins with clinical aspects of CVD dyslipidemia the imbalance of lipids such as cholesterol and the use of statins for treatment The next sections provide detailed discussion on the use of statins for different types of CVD including coronary artery disease hypertension heart failure arrhythmia stroke and more The following chapters cover statin

use for other systemic diseases such as obesity kidney disease diabetes ocular disorders skin conditions and many more The book concludes with an insight into future therapies with emphasis on PCSK9 inhibitors a new treatment for lowering cholesterol in the blood *Statins: Indications and Uses, Safety and Modes of Action* Gunnar N. Holmqvist, 2009 This new book focuses on statins which are a relatively new group of drugs used to lower blood cholesterol levels A high cholesterol level increases a person's risk of having a heart attack or stroke The long term use of statins reduces the risk of such an event and can increase the life expectancy of people with a history of heart disease The statins work by blocking an enzyme in the body that is involved in the production of LDL cholesterol especially in the liver This enzyme is known as HMG coenzyme A reductase The statins are the most effective group of drugs for lowering the levels of LDL cholesterol in the body Potential side effects include muscle cramps and gastrointestinal upsets These are usually resolved on temporarily lowering the dose Liver enzyme derangements may occur which generally return to normal after briefly discontinuing the drug Some report headaches Other side effects occur rarely
