1.0 Introduction

The field of natural sciences deals with the study of physical world, while the field of social science studies human behavior, views, correlation, and as well as institutions. The fact that some refers to social sciences as a soft science is unrelated to absence of objectivity in the field but rather the object under inquiry is the social life of human which is difficult to observe and give accurate measurement (Neuman, 2014). The inquiries into the social life of man, “understanding exactly how it is that we know what we know”, focusing on the means social scientists get to identify social truths can be ascertained through social science research methodology (Blackstone, 2018). Though there are several sources of knowledge, but social science researchers are dependent on organized procedure to ascertain social facts and these organized structures are otherwise known as research methods (Blackstone, 2018).

2.0 Research

Research is a well-structured inquiry about phenomenon, for the purpose of ascertaining facts and innovation of logical conclusions. Research in social science context is designed for, around and undertaken by human.

2.1 Types of Social Research

Neuman (2014) stated that the type of social research is dependent on the dimension of the research, and the dimension consist of how we apply research results and the main users, the reasons for conducting such research, how we study the number of issues at hand, time integration, and as well as selection of techniques to employ in data gathering. This basically resulted to the two types of social research as *basic* and *applied* research.

Basic research that is otherwise refers to as “fundamental research”, “pure research” or academic research is the progenitor of virtually all scientific ideas and principles (Neuman, 2014) because it primarily focuses on the establishment and advancement of novel ideas, principle and theories about phenomenon (National Science Foundation, as cited in Mansfield, 1980).
