

Gasoline. Fresh oil. If multigrade oil is used, it must be changed at the same intervals as the oil left over from the previous oil change. Do not add oil to the gasoline.

Overfill the fuel tank. Leave the fuel to expand.

Explosive Fuel
Gasoline is extremely flammable and can explode if ignited. Store gasoline in approved containers away from buildings, away from heat, and away from open flames. Do not add gasoline to a tank that is hot or running, or to a tank that has spilled gasoline. Gasoline is a cleaning agent.

Oil
Type and weight are extremely important. See "Required Oil" (page 4). Failure to use the proper oil can cause wear and tear.

Be sure the oil is the proper type.

API
Service
Oil

Strainer 30-weight oil is recommended. If multigrade oil is used, it must be changed at the same intervals as the oil left over from the previous oil change. Do not add oil to the gasoline.

Increased oil consumption and a corresponding increase in oil change intervals may be required.

More frequent oil changes are required.

(See "Changing Oil," "Oil Filter," and "Required Maintenance" on page 2, and 4.)

CAUTION: Using other than service class SP oil or extending oil change intervals longer than recommended could cause engine damage which is not covered by the engine warranty.

A logo or symbol on oil containers identifies the API service class and SAE viscosity grade.

Checking Oil
Check oil BEFORE EACH USE as follows:

1. Make sure the engine is stopped and resting on a level surface. Also make sure the engine is cool and the oil has had time to drain into the sump.
2. Before removing the oil dipstick or dipstick, clean the area around these parts to keep dirt and debris out of the engine.

CAUTION: Do not touch the oil dipstick or dipstick when the engine is hot. The oil is extremely hot and can cause burns.

Change Oil
For more information, see "Changing Oil" (page 4).

Oil Filter

Some engines are equipped with an oil filter. Replace the oil filter every time you change the oil. See the "Oil Change" section for more information.

1. Drain the oil from the engine.
2. Remove the old oil filter.
3. Install the new oil filter.
4. Add the new oil.

OPERATING INSTRUCTIONS

ALSO READ THE OPERATING INSTRUCTIONS OF THE EQUIPMENT THIS ENGINE POWERS

PRE-START CHECKLIST

- Check oil level. Add oil if low.
- Check fuel level. Add fuel if low.
- Check cooling air intake areas and exhaust surfaces of engine. Make sure they are clean and unobstructed.
- Check that the air cleaner components and all shrouds, equipment covers, and guards are in place and securely fastened.
- Check that any clutches or transmissions are disengaged or placed in neutral. This is especially important on equipment with hydrostatic drive. The shift lever must be exactly in neutral to prevent resistance which could keep the engine from starting.

WARNING: Lethal Exhaust Gases

Engine exhaust gases contain poisonous carbon monoxide. Avoid inhaling fumes, and never run the engine in a closed building or confined area.

STARTING

1. Move the throttle control lever slowly between the SLOW and FAST positions.
2. Move the choke control into the FULL CHOKE position.
3. Activate the starter switch. Release the switch as soon as the engine starts.

CAUTION: Do not start the engine continuously for more than 10 seconds at a time. If the engine does not start, allow a 30-second cool-down period between starting attempts. Failure to follow these guidelines can burn out the starter motor.

CAUTION: If the engine develops sufficient speed to disengage the starter but does not keep running (a "false start"), the engine rotation must be allowed to come to a complete stop before attempting to restart the engine. If the starter is engaged while the flywheel is rotating, the starter pinion and flywheel ring gear may clash, resulting in damage to the starter.

If the starter does not turn the engine over, shut off starter immediately. Do not make further attempts to start the engine until the condition is corrected. Do not jump start the battery. Refer to "BATTERY" (page 5) for more information.

Gradually return the choke to the OFF position after starts and warm-up.

BATTERY

A 12-volt battery with an approximately 30-amp nominal capacity is recommended. Refer to the instructions of the equipment engine powers for specification.

If the battery charge is not to run over the engine, refer to the battery.

CAUTION: Do not attempt to start the engine with another battery. Starting with batteries not recommended can burn the starter motor.

Also see "BATTERY CHARGE" (page 5).
