Energy Efficient Hardware-Software Co-Synthesis Using Reconfigurable Hardware Jingzhao Ou, Viktor K. Prasanna, 2009-10-14 Rapid energy estimation for energy efficient applications using field programmable gate arrays FPGAs remains a challenging research topic Energy dissipation and efficiency have prevented the widespread use of FPGA devices in embedded systems Helping overcome these challenges this book offers solutions for the development of energy efficient applications using FPGAs It provides a framework for high level hardware software application development describes energy performance modeling for reconfigurable system on chip devices and explores energy efficient designs for various applications The authors present a two step rapid energy estimation technique that enables high level design space exploration and offer a hardware software design for energy efficient implementations of operating systems

Tree-Shaped Fluid Flow and Heat Transfer António F. Miguel, Luiz A. O. Rocha, 2018-04-20 This book provides the first comprehensive state of the art research on tree dendritic fluid flow and heat transfer It covers theory numerical simulations and applications It can serve as extra reading for graduate level courses in engineering and biotechnology Tree flow networks also known as dendritic flow networks are ubiquitous in nature and engineering applications Tree shaped design is prevalent when the tendency of the flow fluid energy matter and information is to move more easily between a volume or area and a point and vice versa From the geophysical trees to animals and plants we can observe numerous systems that exhibit tree architectures river basins and deltas lungs circulatory systems kidneys vascularized tissues roots stems and leaves among others Tree design is also prevalent in man made flow systems both in macro and microfluidic devices A vast array of tree shaped design is available and still emerging in chemical engineering electronics cooling bioengineering chemical and bioreactors lab on a chip systems and smart materials with volumetric functionalities such as self healing and self cooling This book also addresses the basic design patterns and solutions for cooling bodies where there is heat generation Several shapes of fin as well as assemblies of fins are addressed An up to date review of cavities i.e inverted or negative fins for facilitating the flow of heat is also presented Heat trees using high thermal conductivity material can be used in the cooling of heat generating bodies and can also be applied to the cooling of electronics
