Bone and Metabolic Activities Martha J. Somerman, Kaumudi Joshipura, Francisco Nociti, Nan E. Hatch, Bjorn Olsen, Thomas E. Van Dyke, Monzur Murshed, Nancy Lane, 2023-08-31 Substantial progress has been made in defining genes and proteins involved in development maintenance and regeneration of teeth and bones This knowledge has improved strategies for diagnosing and treating mineralized tissue diseases Existing data provide credence for these genes proteins having roles beyond those attributed to mineralized tissues For example they may affect systemic metabolic activity and glucose tolerance One example is fibroblast growth factor 23 Fgf23 a hormone secreted by osteocytes suppressing phosphate reabsorption into the blood stream and vitamin D synthesis in the kidney Many other bone associated proteins perhaps acting as endocrine factors are reported to act at distant sites to alter metabolic activity However there remains substantial uncertainty as to whether bone itself functioning as an endocrine organ and or factors secreted by bone could modulate metabolic activity Such information should be of value toward informing clinical strategies to treat mineralized tissue and metabolic disorders Handbook of Immunohistochemistry and in Situ Hybridization of Human Carcinomas M. A.

Hayat, 2005-01-31 Immunohistochemistry is the use of specific antibodies to stain particular molecular species in situ This technique has allowed the identification of many more cell types than could be visualized by classical histology particularly in the immune system and among the scattered hormone secreting cells of the endocrine system and has the potential to improve diagnosis prognosis and therapeutic options of cancer Handbook of Immunohistochemistry and in Situ Hybridization of Human Carcinomas discusses all aspects of immunohistochemistry and in situ hybridization technologies and the important role they play in reaching a cancer diagnosis It provides step by step instructions on the methods of additional molecular technologies such as DNA microarrays and microdissection along with the benefits and limitations of each method The topics of region specific gene expression its role in cancer development and the techniques that assist in the understanding of the molecular basis of disease are relevant and necessary in science today This book is the second volume of three planned individually sold volumes on this topic Like Volume 1 this book fully explains the principles and applications of modern techniques used in the field of molecular genetics It will be of particular interest to pathologists and molecular pathologists conducting both academic and or clinical research The only book available that translates molecular genetics into cancer diagnosis The results of each Immunohistochemical and in situ hybridization method are presented in the form of color illustrations Methods discussed were either developed or refined by expert contributors in their own laboratories

**Science** Hisayuki Uneyama, Ken Iwatsuki, Nobuyuki Sakai, Keiko Yasumatsu, 2025-04-24 In the Anthropocene the global food system affects the geosystem and its biosphere and thus it is important for us to reconsider our eating styles and develop new and sustainable food systems This is particularly crucial since we are facing the risk of morbidity and mortality result from unhealthy diets In 2019 the EAT Lancet commission offered a new food standard that gratifies both health and environmental sustainability calling it the planetary health diet It is necessary for us to understand the sensory characteristics of the planetary health diet and how we humans select consume and develop foods and beverages to satisfy the standards of this new dietary approach These understandings add more fuel to promote the achievements of Sustainable Development Goals and of the planetary health diet This Research Topic aims to reveal the neural and biological mechanisms underlying the perception and selection of the planetary health diet Currently we have only little knowledge about taste and flavor perception so we do not know what sensory characteristics of foods are liked Also we do not know the mechanisms involved in selecting certain foods For example we know that excessive salt intake induces hypertension and or obesity but often we do not select low salt foods even when suffering from the high blood pressure We also know that animal models e g mice rats consume more of diets that impart a good taste for them As humans however we do not always eat so much of foods that may taste good for us and may consume foods or beverages that are not so enjoyable for us Thus a multidisciplinary approach is needed to challenge these topics
