**Linear Algebra I** Frederick P. Greenleaf, Sophie Marques, 2019-01-30 This book is the first of two volumes on linear algebra for graduate students in mathematics the sciences and economics who have a prior undergraduate course in the subject a basic understanding of matrix algebra and some proficiency with mathematical proofs Proofs are emphasized and the overall objective is to understand the structure of linear operators as the key to solving problems in which they arise This first volume re-examines basic notions of linear algebra vector spaces linear operators duality determinants diagonalization and inner product spaces giving an overview of linear algebra with sufficient mathematical precision for advanced use of the subject This book provides a nice and varied selection of exercises examples are well crafted and provide a clear understanding of the methods involved New notions are well motivated and interdisciplinary connections are often provided to give a more intuitive and complete vision of linear algebra Computational aspects are fully

covered but the study of linear operators remains the focus of study in this book
