Lectures On Dynamical Systems, Structural Stability And Their Applications Kotik K Lee, 1992-05-14 The communication of knowledge on nonlinear dynamical systems between the mathematicians working on the analytic approach and the scientists working mostly on the applications and numerical simulations has been less than ideal This volume hopes to bridge the gap between books written on the subject by mathematicians and those written by scientists The second objective of this volume is to draw attention to the need for cross fertilization of knowledge between the physical and biological scientists The third aim is to provide the reader with a personal guide on the study of global nonlinear dynamical systems

h-Principles and Flexibility in Geometry Hansjörg Geiges, 2003 The notion of homotopy principle or h principle is one of the key concepts in an elegant language developed by Gromov to deal with a host of questions in geometry and topology Roughly speaking for a certain differential geometric problem to satisfy the h principle is equivalent to saying that a solution to the problem exists whenever certain obvious topological obstructions vanish The foundational examples for applications of Gromov's ideas include i Hirsch Smale immersion theory ii Nash Kuiper C^1 isometric immersion theory iii existence of symplectic and contact structures on open manifolds Gromov has developed several powerful methods that allow one to prove h principles These notes based on lectures given in the Graduiertenkolleg of Leipzig University present two such methods which are strong enough to deal with applications i and iii
