ranging in scale from the quality of local tap water to the changing global climate The Burning Question and Apply It Now boxes support my efforts to help readers learn why biology matters Each chapter now also includes one or more Scientific Literacy questions These new thought questions at the end of each chapter will help students practice thinking like a scientist about relevant social political or ethical issues We continue to acknowledge the growing numbers of instructors and students who are embracing digital textbooks Preface SmartBook user data from thousands of students using the fourth edition helped us to identify passages that needed clarification The user data also guided us as we created a carefully selected array of digital Learning Resources to accompany many probes in SmartBook In addition many chapters have bonus features for ebook users including new digital only miniglossaries tables figures and live action videos of plants fungi and animals see the Changes by Chapter section for a complete listing of our new additions Ebook users will notice another new feature that supports the goal of bringing biology into student lives a set of 12 relevancy modules that explain core biology content in the context of timely topics Relevancy module topics span the book's units from the process of science Himalayan salt lamps to organic chemistry chocolate to metabolism weight gain to cell division cancer to evolution antibiotic resistance to plant biology mega crops to animal biology running a marathon to ecology climate change and more Depending on their teaching goals instructors can assign a module before or after covering the core content and use it as a jumping off point for class discussions or homework assignments I believe that one set of tools and techniques does not work in every classroom For that reason my team and I are proud to create a package that gives you the flexibility to teach introductory biology in a way that works best for you The following sections illustrate the features and resources for this edition that can help you meet your teaching goals I hope that you and your students enjoy this text and that it helps cultivate an understanding of and deep appreciation for biology

Biology Mariëlle Hoefnagels, 2021-03 I have been teaching nonmajors biology at the University of Oklahoma since 1997 and over that time have encountered many students who fear science in general and biology in particular The complexity abstractions and unfamiliar terms can seem overwhelming at first but with practice I know that anyone can think like a scientist Learning to think scientifically is important well beyond passing your biology class After all scientific issues confront you every day as you navigate your life and your social media accounts How do you know if a claim about climate change is scientific Will you be able to identify misinformation and interpret graphs during the next global health crisis This book will teach you not only to understand the scientific terms you encounter but also to distinguish good science from unscientific claims I've created the following features to help you make the transition from memorizing facts to understanding concepts from accepting scientific claims to analyzing them for yourself These tools will help you to pass your class and to be an informed citizen
