Lambda Expressions

Lambda expressions are a concise way to represent anonymous functions in Java.

They provide a shorthand notation for writing code by allowing the creation of small, inline implementations of functional interfaces.

Lambda expressions consist of parameters, an arrow token (->), and a body.

```java
// Ensures the interface can have just one method
@FunctionalInterface
interface SumFunction {
  int sum(int a, int b);
}

public class LambdaExample {

  public static void main(String[] args) {
    SumFunction sumfunction = (a, b) -> a + b;
    int result = sumfunction.sum(5, 3);
  }

}
```

Functional interfaces are Java interfaces that contain exactly one abstract method. They serve as

The world before Lambda

This is the same example rewritten as a standard anonymous inner Class:

```java
interface SumFunction {
    int sum(int a, int b);
}

SumFunction sumfunction = new SumFunction()
{
    @Override
    public int sum(int a, int b) {
        return a + b;
    }
};

int result = sumfunction.sum(5, 3);
```

All functional interfaces implement exactly one method, which allows for syntactic sugar to implement that one method with much less code.

```
() -> expression | statement
param -> expression | statement
(params) -> expression | statement
(params) -> { expressions and statements }
(types) (params) -> { expressions and statements }
```

...ed to provide a container for a value that may or may not be present.

Optional is to handle the scenario where a method might return a result.

Optional.empty();

If a non-null value

Optional.of(value);

If a potentially null value

Optional.ofNullable(value);

"if "optional" is null

orElse("default");

? or throw an Exception

orElseThrow();

Get "result" to "value" or get it from

```java
String result = optional.ofNullable(value)
   .orElse(value);
```

Use Lambda Expressions

```java
Optional<String> optionalValue = ...;
if (optionalValue.isPresent()) {
    String value = optionalValue.get();
    // Process value
}

// Can be rewritten as:
optionalValue.ifPresent(value -> {
    // Process value
});
```

Lambda Expressions avoid ... statements to check if a val...

Virtual Threads

Virtual threads are lightweight threads that reduce the effort of writing, maintaining, and debugging high-throughput concurrent applications.

Java Modules

A **Module** is a group of closely related packages and resources along with a new module descriptor file.

Module Types

- **Automatic Modules**
- **Named Modules**
- **Unnamed Modules**

Java Records

Records are special Classes designed to make it concise and easy to create classes whose primary purpose is to store data, and they are particularly useful for modeling immutable data.

```java
record Person(String name, int age) { }

Person person = new Person("Alice", 30);
String name = person.name();
int age = person.age();
person.name = "Bob";
```
