## **Java 7 New Features Cookbook Reese Jennifer L:**

*Java 7 New Features Cookbook* Richard M. Reese, Jennifer L. Reese, 2012 Each recipe comprises step by step instructions followed by an analysis of what was done in each task and other useful information The book is designed so that you can read it chapter by chapter or look at the list of recipes and refer to them in no particular order Each example comes with its expected output to make your learning even easier This book is designed to bring those who are familiar with Java up to speed on the new features found in Java 7 *Natural Language Processing with Java Cookbook* Richard M.

Reese, 2019-04-25 A problem solution guide to encounter various NLP tasks utilizing Java open source libraries and cloud based solutions Key Features Perform simple to complex NLP text processing tasks using modern Java libraries Extract relationships between different text complexities using a problem solution approach Utilize cloud based APIs to perform machine translation operations Book Description Natural Language Processing NLP has become one of the prime technologies for processing very large amounts of unstructured data from disparate information sources This book includes a wide set of recipes and quick methods that solve challenges in text syntax semantics and speech tasks At the beginning of the book you ll learn important NLP techniques such as identifying parts of speech tagging words and analyzing word semantics You will learn how to perform lexical analysis and use machine learning techniques to speed up NLP operations With independent recipes you will explore techniques for customizing your existing NLP engines models using Java libraries such as OpenNLP and the Stanford NLP library You will also learn how to use NLP processing features from cloud based sources including Google and Amazon s AWS You will master core tasks such as stemming lemmatization part of speech tagging and named entity recognition You will also learn about sentiment analysis semantic text similarity language identification machine translation and text summarization By the end of this book you will be ready to become a professional NLP expert using a problem solution approach to analyze any sort of text sentences or semantic words What you will learn Explore how to use tokenizers in NLP processing Implement NLP techniques in machine learning and deep learning applications Identify sentences within the text and learn how to train specialized NER models Learn how to classify documents and perform sentiment analysis Find semantic similarities between text elements and extract text from a variety of sources Preprocess text from a variety of data sources Learn how to identify and translate languages Who this book is for This book is for data scientists NLP engineers and machine learning developers who want to perform their work on linguistic applications faster with the use of popular libraries on JVM machines This book will help you build real world NLP applications using a recipe based approach Prior knowledge of Natural Language Processing basics and Java programming is expected **Mastering Concurrency Programming with Java 8** Javier Fernández González, 2016-02-29 Master the principles and techniques of multithreaded programming with the Java 8 Concurrency API About This Book Implement concurrent applications using the Java 8 Concurrency API and its new components Improve the performance of your applications or process more data at the

same time taking advantage of all of your resources Construct real world examples related to machine learning data mining image processing and client server environments Who This Book Is For If you are a competent Java developer with a good understanding of concurrency but have no knowledge of how to effectively implement concurrent programs or use streams to make processes more efficient then this book is for you What You Will Learn Design concurrent applications by converting a sequential algorithm into a concurrent one Discover how to avoid all the possible problems you can get in concurrent algorithms Use the Executor framework to manage concurrent tasks without creating threads Extend and modify Executors to adapt their behavior to your needs Solve problems using the divide and conquer technique and the Fork Join framework Process massive data sets with parallel streams and Map Reduce implementation Control data race conditions using concurrent data structures and synchronization mechanisms Test and monitor concurrent applications In Detail Concurrency programming allows several large tasks to be divided into smaller sub tasks which are further processed as individual tasks that run in parallel All the sub tasks are combined together once the required results are achieved they are then merged to get the final output The whole process is very complex This process goes from the design of concurrent algorithms to the testing phase where concurrent applications need extra attention Java includes a comprehensive API with a lot of ready to use components to implement powerful concurrency applications in an easy way but with a high flexibility to adapt these components to your needs The book starts with a full description of design principles of concurrent applications and how to parallelize a sequential algorithm We ll show you how to use all the components of the Java Concurrency API from basics to the most advanced techniques to implement them in powerful concurrency applications in Java You will be using real world examples of complex algorithms related to machine learning data mining natural language processing image processing in client server environments Next you will learn how to use the most important components of the Java 8 Concurrency API the Executor framework to execute multiple tasks in your applications the Phaser class to implement concurrent tasks divided into phases and the Fork Join framework to implement concurrent tasks that can be split into smaller problems using the divide and conquer technique Toward the end we will cover the new inclusions in Java 8 API the Map and Reduce model and the Map and Collect model The book will also teach you about the data structures and synchronization utilities to avoid data race conditions and other critical problems Finally the book ends with a detailed description of the tools and techniques that you can use to test a Java concurrent application Style and approach A complete guide implementing real world examples with algorithms related to machine learning data mining and natural language processing in client server environments All the examples are explained in a step by step approach *Java: Data Science Made Easy* Richard M. Reese, Jennifer L. Reese, Alexey Grigorev, 2017-07-07 Data collection processing analysis and more About This Book Your entry ticket to the world of data science with the stability and power of Java Explore analyse and visualize your data effectively using easy to follow examples A highly practical course covering a broad set of topics from the basics of Machine Learning to Deep

Learning and Big Data frameworks Who This Book Is For This course is meant for Java developers who are comfortable developing applications in Java and now want to enter the world of data science or wish to build intelligent applications Aspiring data scientists with some understanding of the Java programming language will also find this book to be very helpful If you are willing to build efficient data science applications and bring them in the enterprise environment without changing your existing Java stack this book is for you What You Will Learn Understand the key concepts of data science Explore the data science ecosystem available in Java Work with the Java APIs and techniques used to perform efficient data analysis Find out how to approach different machine learning problems with Java Process unstructured information such as natural language text or images and create your own search Learn how to build deep neural networks with DeepLearning4j Build data science applications that scale and process large amounts of data Deploy data science models to production and evaluate their performance In Detail Data science is concerned with extracting knowledge and insights from a wide variety of data sources to analyse patterns or predict future behaviour It draws from a wide array of disciplines including statistics computer science mathematics machine learning and data mining In this course we cover the basic as well as advanced data science concepts and how they are implemented using the popular Java tools and libraries The course starts with an introduction of data science followed by the basic data science tasks of data collection data cleaning data analysis and data visualization This is followed by a discussion of statistical techniques and more advanced topics including machine learning neural networks and deep learning You will examine the major categories of data analysis including text visual and audio data followed by a discussion of resources that support parallel implementation Throughout this course the chapters will illustrate a challenging data science problem and then go on to present a comprehensive Java based solution to tackle that problem You will cover a wide range of topics from classification and regression to dimensionality reduction and clustering deep learning and working with Big Data Finally you will see the different ways to deploy the model and evaluate it in production settings By the end of this course you will be up and running with various facets of data science using Java in no time at all This course contains premium content from two of our recently published popular titles Java for Data Science Mastering Java for Data Science Style and approach This course follows a tutorial approach providing examples of each of the concepts covered With a step by step instructional style this book covers various facets of data science and will get you up and running quickly *Machine Learning: End-to-End guide for Java developers* Richard M. Reese, Jennifer L. Reese, Bostjan Kaluza, Dr. Uday Kamath, Krishna Choppella, 2017-10-05 Develop Implement and Tuneup your Machine Learning applications using the power of Java programming About This Book Detailed coverage on key machine learning topics with an emphasis on both theoretical and practical aspects Address predictive modeling problems using the most popular machine learning Java libraries A comprehensive course covering a wide spectrum of topics such as machine learning and natural language through practical use cases Who This Book Is For This course is the right resource for anyone

with some knowledge of Java programming who wants to get started with Data Science and Machine learning as quickly as possible If you want to gain meaningful insights from big data and develop intelligent applications using Java this course is also a must have What You Will Learn Understand key data analysis techniques centered around machine learning Implement Java APIs and various techniques such as classification clustering anomaly detection and more Master key Java machine learning libraries their functionality and various kinds of problems that can be addressed using each of them Apply machine learning to real world data for fraud detection recommendation engines text classification and human activity recognition Experiment with semi supervised learning and stream based data mining building high performing and real time predictive models Develop intelligent systems centered around various domains such as security Internet of Things social networking and more In Detail Machine Learning is one of the core area of Artificial Intelligence where computers are trained to self learn grow change and develop on their own without being explicitly programmed In this course we cover how Java is employed to build powerful machine learning models to address the problems being faced in the world of Data Science The course demonstrates complex data extraction and statistical analysis techniques supported by Java applying various machine learning methods exploring machine learning sub domains and exploring real world use cases such as recommendation systems fraud detection natural language processing and more using Java programming The course begins with an introduction to data science and basic data science tasks such as data collection data cleaning data analysis and data visualization The next section has a detailed overview of statistical techniques covering machine learning neural networks and deep learning The next couple of sections cover applying machine learning methods using Java to a variety of chores including classifying predicting forecasting market basket analysis clustering stream learning active learning semi supervised learning probabilistic graph modeling text mining and deep learning The last section highlights real world test cases such as performing activity recognition developing image recognition text classification and anomaly detection The course includes premium content from three of our most popular books Java for Data Science Machine Learning in Java Mastering Java Machine Learning On completion of this course you will understand various machine learning techniques different machine learning java algorithms you can use to gain data insights building data models to analyze larger complex data sets and incubating applications using Java and machine learning algorithms in the field of artificial intelligence Style and approach This comprehensive course proceeds from being a tutorial to a practical guide providing an introduction to machine learning and different machine learning techniques exploring machine learning with Java libraries and demonstrating real world machine learning use cases using the Java platform *Machine Learning: End-To-End Guide for Java Developers* Richard M.
