Indian Agriculture: Challenges, Priorities and Solutions Naveen K. Sharma, Pradeep Kumar Rai, Dinesh Chandra Rai, 2025-05-12 This edited volume examines the challenges and solutions in the intricate landscape of Indian agriculture and global trade. It explores the historical shifts from an industry-driven to an agrarian economy followed by rapid urbanization in the latter half of the 20th century. Modern agri-business is a global phenomenon not only affected by local and regional factors but also by global policies directed by global agencies. This book focuses on problems commonly associated with the advancement of agriculture in India as well as issues arising out of global agricultural trade. The book contains chapters on associated problems, some priority issues, and approaches that could be used to overcome these limitations. Focused on rural India, the book underscores the critical role of agriculture contributing a major part to the national income. The book highlights the economic opportunities arising from agriculture, emphasizing the need for sustainable practices given ecological, cultural, and socio-economic impacts. Addressing the complexities, the book advocates for diversification, adaptive varieties, and technological integration including biotechnology and information technologies to ensure the sustainability of agriculture. It also stresses the urgency of coherent national policies for soil and water resource use, marketing, business management, climate impacts, and more. It outlines key interventions and frameworks designed to guide actions on food security and nutrition, making a case for India's crucial role in global food production and supply chain systems. The book has been written and edited by leading researchers of the respective fields. It is a useful resource for students, researchers, academicians, as well as farmers and policymakers.

Nature-based solutions in agriculture: Sustainable management and conservation of land, water and biodiversity Miralles-Wilhelm, F., 2021-02-03 In recent years, considerable progress has been made in the area of Nature-based Solutions (NbS) that improve ecosystem functions of environments and landscapes affected by agricultural practices and land degradation while enhancing livelihoods and other social and cultural functions. This has opened up a portfolio of NbS options that offer a pragmatic way forward for simultaneously addressing conservation, climate, and socioeconomic objectives while maintaining healthy and productive agricultural systems. NbS can mimic natural processes and build on land restoration and operational water land management concepts that aim to simultaneously improve vegetation and water availability and quality and raise agricultural productivity. NbS can involve conserving or rehabilitating natural ecosystems and/or the enhancement or the creation of natural processes in modified or artificial ecosystems. In agricultural landscapes, NbS can be applied for soil health, soil moisture, carbon mitigation through soil and forestry, downstream water quality, biodiversity benefits, as well as agricultural production and supply chains to achieve net-zero environmental impacts while achieving food and water security and meeting climate goals.
