Jensen Asce Manual On Engineering 70:

Irrigation Theory And Practice - 2Nd Edn A M Michael,2009-11 It is a comprehensive treatise on Water Resources Development and Irrigation Management For the last 30 years the book has enjoyed the status of an definitive textbook on the subject It has now been thoroughly revised and updated and thus substantially enlarged In addition to the wholesale revision of the existing chapters three new chapters have been added to the book namely Lift Irrigation Systems and their Design Water Requirement of Crops and Irrigation Management and Economic Evaluation of Irrigation Projects and Water Pricing Policy Engineering Specification Guidelines for Wetland Plant Establishment and Subgrade Preparation Kenneth P. Dunne,A. Mahendra Rodrigo,Edward Samanns,1998 This report explains the process involved when proceeding from a wetland mitigation design concept to a fill engineering package that is suitable for public bid and advertisement The information provided is geared toward educating nonengineering professionals engaged in developing wetland mitigation specifications The biological foundations for the various elements are first presented followed by full guideline specifications The vegetation specifications address site preparation plant material acquisition transport handling and storage of seeds herbs and saplings planting methods for various stock types different seeding methods tiring of planting in conjunction with seasonal variations hydrological considerations such as tidal cycle water level and rainfall patterns equipment access and type protection measures for herbivory inundation and vandalism fertilization and amendrment application soil nutrient testing substrate handling trppsport and storage and minimization of impacts on existing wetland resources The subgrade specifications target construction methods and equipment soil material testing and performance The other soil related specifications quarantine and safeguard existing resources such as friable surface soils and wetland topsoils that can be used to seed a site Manuals of Engineering Practice ,1996 *Evapotranspiration* Ayse Irmak,2012-01-18 This edition of *Evapotranspiration Remote Sensing and Modeling* contains 23 chapters related to the modeling and simulation of evapotranspiration ET and remote sensing based energy balance determination of ET These areas are at the forefront of technologies that quantify the highly spatial ET from the Earth s surface The topics describe mechanics of ET simulation from partially vegetated surfaces and stomatal conductance behavior of natural and agricultural ecosystems Estimation methods that use weather based methods soil water balance the Complementary Relationship the Hargreaves and other temperature radiation based methods and Fuzzy Probabilistic calculations are described A critical review describes methods used in hydrological models Applications describe ET patterns in alpine catchments under water shortage for irrigated systems under climate change and for grasslands and pastures Remote sensing based approaches include Landsat and MODIS satellite based energy balance and the common process models SEBAL METRIC and S SEBS Recommended guidelines for applying operational satellite based energy balance models and for overcoming common challenges are made
