Pollution is one of the most serious issues facing mankind and other life forms on earth. Environmental pollution leads to the degradation of ecosystems, loss of services, economic losses, and various other problems. The eco-friendliest approach to rejuvenating polluted ecosystems is with the help of microorganism-based bioremediation. Microorganisms are characterized by great biodiversity, genetic and metabolic machinery, and by their ability to survive even in extremely polluted environments. As such, they are and will remain the most important tools for restoring polluted ecosystems and habitats. This three-volume book sheds light on the utilization of microorganisms and the latest technologies for cleaning up polluted sites. It also discusses the remediation or degradation of various important pollutants such as pesticides, wastewater, plastics, PAHs, oil spills, etc. The book also explains the latest technologies used for the degradation of pollutants in several niche ecosystems. Given its scope, the book will be of interest to teachers, researchers, bioremediation scientists, capacity builders, and policymakers. It also offers valuable additional reading material for undergraduate and graduate students of microbiology, ecology, soil science, and the environmental sciences. *Pakistan Journal of Botany* ,2005 British Paperbacks in Print ,1985 **Whitaker's Cumulative Book List** ,1983 **Pakistan Journal of Scientific Research** ,2004 **British Books in Print** ,1986 **The Microscope** ,2002 Vol 3 adds section The Entomological monthly *The British National Bibliography* Arthur James Wells, 1998 □□□□□ ,1998 **Biological & Agricultural Index** ,1984
