Mineralization and Sustainable Development in the West African Craton T. Aïfa,2021-07-22 This Special
Publication combines results obtained by interdisciplinary groups from numerous academic institutions working on
Paleoproterozoic formations to decipher the origins of the main mineralization resources in the West African Craton WAC
and their impacts on African economic development Structural geophysical sedimentological stratigraphical geochemical
petrophysical and mineralogical analyses have been used to highlight the complexities involved in mineralization
emplacement and its origin and evolution within the WAC Fourteen articles contribute to new knowledge in mineral research
They show that the geodynamic evolution of the WAC is complex from one area to another it involves subduction collision and
obduction during several deformation phases ranging from Birimian 2 3 2 0 Ga to Pan African 650 450 Ma events Various
modelling techniques when integrated help in understanding the mechanisms of mineralization emplacement some of which
are still a matter of debate The challenge for further studies is mitigation for sustainable development that can be
appropriately used to minimize such damage Clay Mineralogy, Authigenic Smectite Concentration, and Fault Weakening
