

Minolta SR-M: The only unitized motordrive camera

The built-in vs. the put-ons.

Consider what happens to a 35mm SLR when there's a motor running it, instead of a hand.

In one minute, the shutter must open and close up to an unbelievable 180 times!

Imagine the vibrations the camera must absorb, the punishment it must withstand. Hour after hour. Day in, day out.

No ordinary camera, with ordinary parts, can be expected to operate very long with this kind of abuse.

Which is why you really have to start from scratch. Not by modifying an existing camera, but by building motor and camera as an integrated unit. The way Minolta designed the SR-M. Specifically for motor operation.

Instead of a camera with a put-on,

separately attached motor, the Minolta SR-M is a solid, unitized, vibration-free instrument made specifically for motorized operation.

Besides a precision micro-motor, it has tougher reinforced gears, a heavy-duty shutter and mirror mechanism and stricter tolerances between all moving parts.

Inside and out, the SR-M is a camera that will stand up to the torturous beating a motor drive gives it.

What's more, because the motor is built-in, it can also work backwards. Just press a lever and the film rewinds all by itself. No other motor drive camera can offer this feature.

Now that the Minolta SR-M is here, 35mm motorized photography will never be the same.
