

# GSD AC Drive Installation Instructions

## WARNING: Before Starting, Warning: Frequency Inverter

- Read the instructions about thoroughly before installation and use for the safety.
- Ensure the safety of power and equipment, and qualified personnel should work on the drive and wiring, and ensure the GSD drive. Please read the instruction sheet thoroughly before using the GSD drive, especially the WARNING, NOTICE and CAUTION notes. If you have any questions, please contact WATSONDIRECT.

## PLEASE READ PRIOR TO INSTALLATION FOR SAFETY

	<ul style="list-style-type: none"> <li>The ground terminal of the GSD drive must be grounded correctly. The grounding method should comply with the laws of the country where the GSD drive is to be installed.</li> <li>After power has been turned off, the capacitor in the GSD drive may release a charge for several minutes. To prevent personal injury, always verify that the "GSD" indicator is turned off. This indicates to confirm that the DC bus voltage has decreased sufficiently and is less than 200V before touching any terminals. A capacitor discharge will take at least 5 minutes for most GSD models.</li> <li>The GSD drive is an internal component of the GSD drive and is sensitive to static electricity. Please do not touch the internal boards with your bare hands before making any cable connection. Please disconnect the internal components in advance.</li> <li>During changes to the wiring, turn off power to the GSD drive before making these changes. When the internal DC bus capacitor in the GSD drive software is in discharge state for making changes to power or wiring, failure to do so may result in short circuit and fire. To prevent personal injury, allow the DC bus voltage to discharge to 0 V before making wiring changes to the GSD drive.</li> <li>Do not touch the GSD drive in locations subject to high temperature, direct sunlight, or harmful radiation.</li> </ul>
	<ul style="list-style-type: none"> <li>When supply power to the GSD drive (AC, 400V, 480V or 600V), do not touch the GSD drive during operation of the GSD drive, only for the built-in fan components and connector system in order for the fan before attempting to service the GSD drive.</li> <li>Do not use the GSD drive for internal components. The same conditions in the GSD drive are easily damaged by high voltage.</li> </ul>
	<ul style="list-style-type: none"> <li>Long-term high-frequency may result in excessive noise due to impedance mismatch between the motor cable and the motor. Excessive noise may damage the insulation of the motor. To ensure the safety of the motor, excessive noise damage, use an inductor cable motor with an impedance rating of 100 ohms. A shield cable inductor between the GSD drive and motor will help to mitigate reflection noise.</li> <li>Maximum supply voltage to the GSD drive should be less than or equal to
