*Journal of the National Cancer Institute* ,2014      *The Rise of English* Rosemary Salomone,Rosemary C. Salomone,2022 A sweeping account of the global rise of English and the high stakes politics of language Spoken by a quarter of the world s population English is today s lingua franca its common tongue The language of business popular media and international politics English has become commodified for its economic value and increasingly detached from any particular nation This meteoric rise of English has many obvious benefits to communication Tourists can travel abroad with greater ease Political leaders can directly engage their counterparts Researchers can collaborate with foreign colleagues Business interests can flourish in the

global economy But the rise of English has very real downsides as well In Europe imperatives of political integration and job mobility compete with pride in national language and heritage In the United States and England English isolates us from the cultural and economic benefits of speaking other languages And in countries like India South Africa Morocco and Rwanda it has stratified society along lines of English proficiency In *The Rise of English* Rosemary Salomone offers a commanding view of the unprecedented spread of English and the far reaching effects it has on global and local politics economics media education and business From the inner workings of the European Union to linguistic battles over influence in Africa Salomone draws on a wealth of research to tell the complex story of English and ultimately to argue for English not as a force for domination but as a core component of multilingualism and the transcendence of linguistic and cultural borders

Alternative Models of Addiction Hanna Pickard, Serge H. Ahmed, Bennett Foddy, 2015-12-07 For much of the 20th century theories of addictive behaviour and motivation were polarized between two models The first model viewed addiction as a moral failure for which addicts are rightly held responsible and judged accordingly The second model in contrast viewed addiction as a specific brain disease caused by neurobiological adaptations occurring in response to chronic drug or alcohol use and over which addicts have no choice or control As our capacity to observe neurobiological phenomena improved the second model became scientific orthodoxy increasingly dominating addiction research and informing public understandings of addiction More recently however a dissenting view has emerged within addiction research based partly on new scientific research and partly on progress in philosophical and psychological understandings of relevant mental phenomena This view does not revert to treating addiction as a moral failure but nonetheless holds that addictive behaviour is fundamentally motivated by choice and subject to at least a degree of voluntary control On this alternative model of addiction addictive behaviour is an instrumental means to ends that are desired by the individual although much controversy exists with respect to the rationality or irrationality of these ends the degree and nature of the voluntary control of addictive behaviour and motivation the explanation of the difference between addictive and non addictive behaviour and motivation and lastly the extent to which addictive behaviour and motivation is correctly characterised as pathological or diseased This research topic includes papers in the traditions of neuroscience psychology philosophy law and social science that explore alternative understandings of addiction

Resources in Education ,1985      **The Connecticut School Journal** ,1874      **The United States Army and Navy Journal and Gazette of the Regular and Volunteer Forces** ,1893      *Cancer Metabolism: Molecular Targeting and Implications for Therapy* Shanmugasundaram Ganapathy-Kanniappan, 2017-11-03 Development of an effective anticancer therapeutic necessitates the selection of cancer related or cancer specific pathways or molecules that are sensitive to intervention Several such critical yet sensitive molecular targets have been recognized and their specific antagonists or inhibitors validated as potential therapeutics in preclinical models Yet majority of anticancer principles or therapeutics show limited success in the clinical translation Thus the need for the development of an effective therapeutic

strategy persists Altered energy metabolism in cancer is one of the earliest known biochemical phenotypes which dates back to the early 20th century The German scientist Otto Warburg and his team Warburg Wind Negelein 1926 Warburg Wind Negelein 1927 provided the first evidence that the glucose metabolism of cancer cells diverge from normal cells This phenomenal discovery on deregulated glucose metabolism or cellular bioenergetics is frequently witnessed in majority of solid malignancies Currently the altered glucose metabolism is used in the clinical diagnosis of cancer through positron emission tomography PET imaging Thus the deregulated bioenergetics is a clinically relevant metabolic signature of cancer cells hence recognized as one of the hallmarks of cancer Hanahan and Weinberg 2011 Accumulating data unequivocally demonstrate that besides cellular bioenergetics cancer metabolism facilitates several cancer related processes including metastasis therapeutic resistance and so on Recent reports also demonstrate the oncogenic regulation of glucose metabolism e g glycolysis indicating a functional link between neoplastic growth and cancer metabolism Thus cancer metabolism which is already exploited in cancer diagnosis remains an attractive target for therapeutic intervention as well The Frontiers in Oncology Research Topic Cancer Metabolism Molecular Targeting and Implications for Therapy emphasizes on recent advances in our understanding of metabolic reprogramming in cancer and the recognition of key molecules for therapeutic targeting Besides the topic also deliberates the implications of metabolic targeting beyond the energy metabolism of cancer The research topic integrates a series of reviews mini reviews and original research articles to share current perspectives on cancer metabolism and to stimulate an open forum to discuss potential challenges and future directions of research necessary to develop effective anticancer strategies Acknowledgment I sincerely thank the Frontiers for providing the opportunity and constant support throughout the process of this research topic and eBook production I gratefully acknowledge all the authors for their valuable contributions Finally I would like to thank my brother Saravana Kumar G K whose personal sacrifices and unflinching encouragement made my career in science possible References Hanahan D Weinberg RA 2011 Hallmarks of cancer The next generation Cell 144 5 646 74 Warburg O Wind F Negelein E 1926 ber den stoffwechsel der tumoren in k rper Klinische Wochenschrift 5 829 32 Warburg O Wind F Negelein E 1927 The metabolism of tumors in the body J Gen Physiol 8 6 519 30 Country Life ,1959 **Engineered Materials Abstracts** ,1986-10
