Life Science Final Examination Grade 11 2014 Caps:

Evolution Education Around the Globe Hasan Deniz, Lisa A. Borgerding, 2018-06-21 This edited book provides a global view on evolution education. It describes the state of evolution education in different countries that are representative of geographical regions around the globe such as Eastern Europe, Western Europe, North Africa, South Africa, North America, South America, Middle East, Far East, South East Asia, Australia, and New Zealand. Studies in evolution education literature can be divided into three main categories: a) understanding the interrelationships among cognitive, affective, epistemological, and religious factors that are related to people's views about evolution; b) designing/implementing/evaluating evolution education curriculum that reflects contemporary evolution understanding; and c) reducing antievolutionary attitudes. This volume systematically summarizes the evolution education literature across these three categories for each country or geographical region. The individual chapters thus include common elements that facilitate a cross-cultural meta-analysis. Written for a primarily academic audience, this book provides a much-needed common background for future evolution education research across the globe.

Educational Psychology Steven R. Wininger, Antony D. Norman, Bruce W. Tuckman, 2025-01-07 Educational Psychology distills the latest research into actionable steps to help students build a solid evidence-based teaching plan as they prepare to go into the classroom. This text takes a meta-cognitive approach, asking students to think about their dual role as both teachers and learners so they can understand not just what to do in the classroom but the why behind it. Motivation is at the heart of Educational Psychology. The authors address the challenges of fostering motivation by offering a practical framework for teachers. This text helps teachers enhance student motivation and links it to other key themes and concepts discussed in the book. Rather than taking an encyclopedic approach, the authors group chapters by topic to help readers remember concepts and connect best practices to big ideas in educational psychology. The text blends scholarship with application by using vignettes, examples, case studies, and practical teaching strategies so students be both methodical and creative in their future classrooms.
