In this book a globalization is proposed that encourages creativity and innovation towards sustainability. With this global sustainability approach, real globalization both rich and poor will benefit from the global sustainability approach. This will close the gap between rich and poor. Developing countries could reap the benefit of current technology without undergoing many of the growing pains associated with development of these technologies. Governments are able to better work together towards common goals now that there is an advantage in cooperation, an improved ability to interact and coordinate, and a global awareness of issues. The book presents a sustainability roadmap to bring together various concepts that have been dealt with independently by previous authors and link them to establish the fundamental practical steps. The flow path and the direction for successful implementation of a sustainability roadmap are also discussed in detail in the book. For the first time, the authors use sustainable communities to create a better quality of life for residents while minimizing the use of the resources to meet current needs and ensure adequate resources for future generations. These green communities create new industries for the local economy and improve public health, which offers more hope for their citizens. Sustainable transportation, renewable energy, recycling, clean water, and urban forests help to make a more livable community and help to control the global climate change. They involve all citizens and incorporate local values into decision making. *Sustaining Human Progress* Khalid Malik, 2014.
