energy metabolism in cancer is one of the earliest known biochemical phenotypes which dates back to the early 20th century. The German scientist Otto Warburg and his team Warburg and Negelein (1926, 1927) provided the first evidence that the glucose metabolism of cancer cells diverges from normal cells. This phenomenal discovery on deregulated glucose metabolism or cellular bioenergetics is frequently witnessed in majority of solid malignancies. Currently, the altered glucose metabolism is used in the clinical diagnosis of cancer through positron emission tomography (PET) imaging. Thus, the deregulated bioenergetics is a clinically relevant metabolic signature of cancer cells, hence recognized as one of the hallmarks of cancer (Hanahan and Weinberg, 2011). Accumulating data unequivocally demonstrate that besides cellular bioenergetics, cancer metabolism facilitates several cancer-related processes including metastasis, therapeutic resistance, and so on. Recent reports also demonstrate the oncogenic regulation of glucose metabolism, e.g., glycolysis, indicating a functional link between neoplastic growth and cancer metabolism. Thus, cancer metabolism, which is already exploited in cancer diagnosis, remains an attractive target for therapeutic intervention as well. The *Frontiers in Oncology Research Topic: Cancer Metabolism: Molecular Targeting and Implications for Therapy* emphasizes on recent advances in our understanding of metabolic reprogramming in cancer and the recognition of key molecules for therapeutic targeting. Besides the topic also deliberates the implications of metabolic targeting beyond the energy metabolism of cancer. The research topic integrates a series of reviews, mini reviews, and original research articles to share current perspectives on cancer metabolism and to stimulate an open forum to discuss potential challenges and future directions of research necessary to develop effective anticancer strategies.

**Acknowledgment** I sincerely thank the *Frontiers* for providing the opportunity and constant support throughout the process of this research topic and eBook production. I gratefully acknowledge all the authors for their valuable contributions. Finally, I would like to thank my brother Saravana Kumar G K whose personal sacrifices and unflinching encouragement made my career in science possible.

*Alternative Models of Addiction* Hanna Pickard, Serge H. Ahmed, Bennett Foddy, 2015-12-07. For much of the 20th century, theories of addictive behaviour and motivation were polarized between two models. The first model viewed addiction as a moral failure for which addicts are rightly held responsible and judged accordingly. The second model, in contrast, viewed addiction as a specific brain disease caused by neurobiological adaptations occurring in response to chronic drug or alcohol use, over which addicts have no choice or control. As our capacity to observe neurobiological phenomena improved, the second model became scientific orthodoxy, increasingly dominating addiction research and informing public understandings of addiction. More recently, however, a dissenting view has emerged within addiction research, based partly on new scientific research and partly on progress in philosophical and psychological understandings of

relevant mental phenomena This view does not revert to treating addiction as a moral failure but nonetheless holds that addictive behaviour is fundamentally motivated by choice and subject to at least a degree of voluntary control On this alternative model of addiction addictive behaviour is an instrumental means to ends that are desired by the individual although much controversy exists with respect to the rationality or irrationality of these ends the degree and nature of the voluntary control of addictive behaviour and motivation the explanation of the difference between addictive and non addictive behaviour and motivation and lastly the extent to which addictive behaviour and motivation is correctly characterised as pathological or diseased This research topic includes papers in the traditions of neuroscience psychology philosophy law and social science that explore alternative understandings of addiction **Research in Education** ,1969-05
