**Concise Introduction to Languages and Machines** Alan P. Parkes, 2010-11-05 A Concise Introduction to Languages and Machines provides an accessible introduction to three key topics within computer science formal languages abstract machines and formal logic Written in an easy to read informal style this textbook assumes only a basic knowledge of programming on the part of the reader The approach is deliberately non mathematical and features Clear explanations of formal notation and jargon Extensive use of examples to illustrate algorithms and proofs Pictorial representations of key concepts Chapter opening overviews providing an introduction and guidance to each topic End of chapter exercises and solutions Offers an intuitive approach to the topics This reader friendly textbook has been written with undergraduates in mind and will be suitable for use on course covering formal languages formal logic computability and automata theory It will also make an excellent supplementary text for courses on algorithm complexity and compilers Introduction to Languages, Machines and Logic Alan P. Parkes, 2002-04-26 A well written and accessible introduction to the most important features of formal languages and automata theory It focuses on the key concepts illustrating potentially intimidating material through diagrams and pictorial representations and this edition includes new and expanded coverage of topics such as reduction and simplification of material on Turing machines complexity and  $O$  notation propositional logic and first order predicate logic Aimed primarily at computer scientists rather than mathematicians algorithms and proofs are presented informally through examples and there are numerous exercises many with solutions and an extensive glossary Introduction to Languages, Machines and Logic Alan P. Parkes, 2012-12-06 1 1 Overview This chapter briefly describes what this book is about what this book tries to do what this book tries not to do a useful feature of the book the exercises 1 2 What This Book Is About This book is about three key topics of computer science namely computable languages abstract machines and logic Computable languages are related to what are usually known as formal languages I avoid using the latter phrase here because later on in the book I distinguish between formal languages and computable languages In fact computable languages are a special type of formal languages that can be processed in ways considered in this book by computers or rather abstract machines that represent computers Abstract machines are formal computing devices that we use to investigate properties of real computing devices The term that is sometimes used to describe abstract machines is automata but that sounds too much like real machines in particular the type of machines we call robots The logic part of the book considers using different types of formal logic to represent things and reason about them The logics we consider all play a very important role in computing They are Boolean logic propositional logic and first order predicate logic FOPL *Basic, the time-sharing language* Nesa L'abbe Wu, 1980 Introduction to Languages and the Theory of Computation John C. Martin, 1991 *An Introduction to Computable Languages and Abstract Machines* Alan Parkes, 1996 The areas of formal languages and automata science are looked upon as especially intimidating by computer science students The 2 subjects are presented in this book in an interesting way by pictorial representations and a non mathematical approach **An Introduction to Languages and**

**Machines** Martin C. Carlisle,2016-04-07 Covers finite automata pushdown automata turing machines as well as an introduction to compilers      An Introduction to Formal Languages and Automata Peter Linz,Susan H. Rodger,2022-02-18 An Introduction to Formal Languages and Automata Seventh Edition is designed for an introductory course on formal languages automata compatibility and related matters forming what is known as the theory of computation      *Largest Solutions of Left-linear Language Inequalities* Michal Kunc,2005      *Language and machines* ,1967
