

9. Fasten base to floor with two No. 8 x 3/4" screws in the front flange.

10. Replace the wall thermostat with the thermostat packed with the Miller furnace.

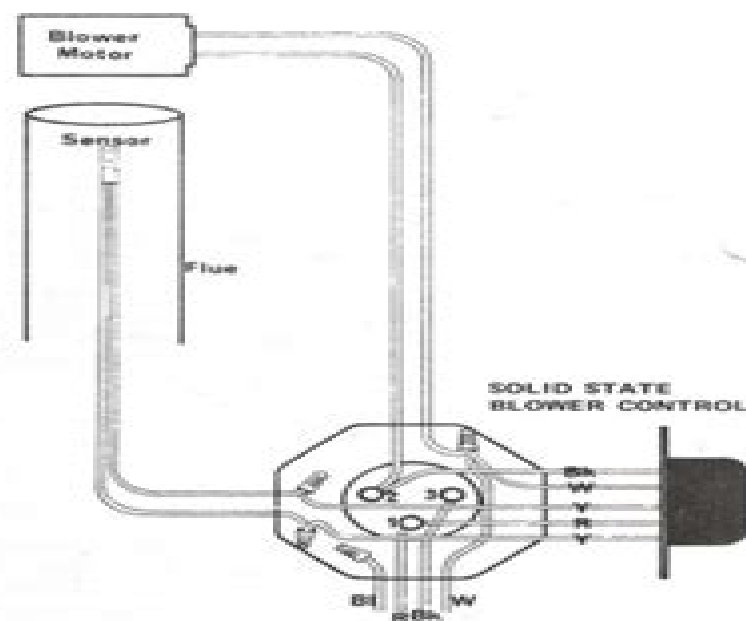

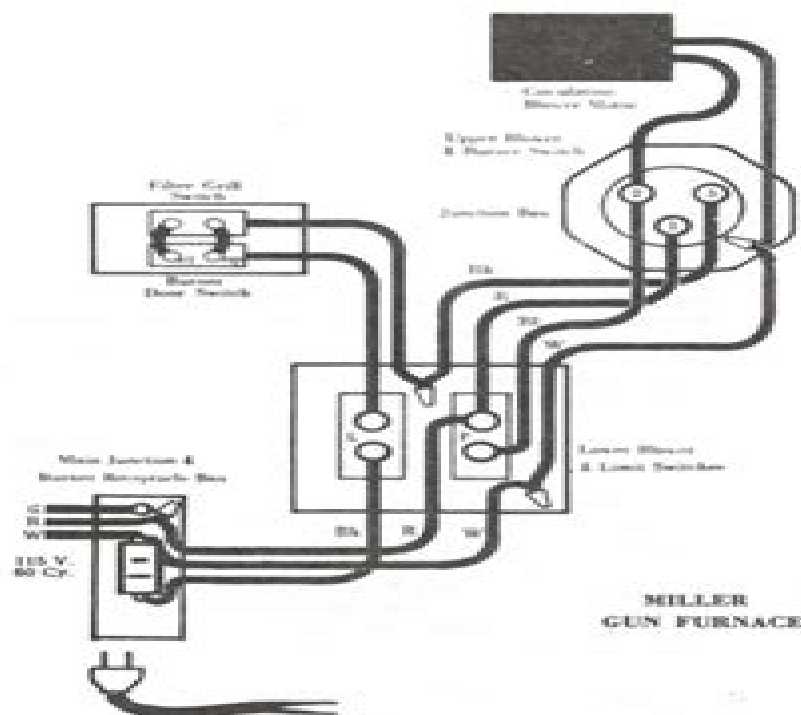

Replacing the Vent Pipe

The Miller Gun Furnace does not require a stack shield. Elbows may be used in the vent pipe connection with no effect on the operating efficiency of the furnace. Use an adjustable 5" elbow to line up the vent pipe with the roof opening. Twist the elbow until it forms an "S", and install. One elbow is normally sufficient to make the

connection. Connect vent pipe to furnace.

2. When replacing an International 1060, use the 4" vent pipe and roof jack already installed by using a 10" c with a 4" hole cut in the center to slide over the vent pipe and fill the gap in the ceiling. Use a 5" to 4" reducer between the 5" adjustable elbow and the 4" vent pipe. Hold in place with sheet metal screws.

3. Install a panel above the furnace to hide the vent pipe. Since Miller Gun Furnaces operate with lower stack temperature, no ventilation of this area is necessary. The Miller Gun Furnace is shorter than others, but the same above panel can be used with a filler made from expanded metal or speaker grille cloth.
