Learning Spaces Interdisciplinary Applied Mathematics:

   Learning Spaces Jean-Claude Falmagne,Jean-Paul Doignon,2010-09-10 Learning spaces offer a rigorous mathematical foundation for practical systems of educational technology Learning spaces generalize partially ordered sets and are special cases of knowledge spaces The various structures are investigated from the standpoints of combinatorial properties and stochastic processes Leaning spaces have become the essential structures to be used in assessing students competence of various topics A practical example is offered by ALEKS a Web based artificially intelligent assessment and learning system in mathematics and other scholarly fields At the heart of ALEKS is an artificial intelligence engine that assesses each student individually and continously The book is of interest to mathematically oriented readers in education computer science engineering and combinatorics at research and graduate levels Numerous examples and exercises are included together with an extensive bibliography   *The Mathematical Foundation of Multi-Space Learning Theory* Tai Wang,Mengsiying Li,2024-03-12 This book explores the measurement of learning effectiveness and the optimization of knowledge retention by modeling the learning process and building the mathematical foundation of multi space learning theory Multi space learning is defined in this book as a micro process of human learning that can take place in more than one space with the goal of effective learning and knowledge retention This book models the learning process as a temporal sequence of concept learning drawing on established principles and empirical evidence It also introduces the matroid to strengthen the mathematical foundation of multi space learning theory and applies the theory to vocabulary and mathematics learning respectively The results show that for vocabulary learning the method can be used to estimate the effectiveness of a single learning strategy to detect the mutual interference that might exist between learning strategies and to predict the optimal combination of strategies In mathematical learning it was found that timing is crucial in both first learning and second learning in scheduling optimization to maximize the intersection effective interval The title will be of interest to researchers and students in a wide range of areas including educational technology learning sciences mathematical applications and mathematical psychology   Knowledge Spaces Jean-Claude Falmagne,Dietrich Albert,Christopher Doble,David Eppstein,Xiangen Hu,2013-06-20 The book describes up to date applications and relevant theoretical results These applications come from various places but the most important one numerically speaking is the internet based educational system ALEKS The ALEKS system is bilingual English Spanish and covers all of mathematics from third grade to the end of high school and chemistry It is also widely used in higher education because US students are often poorly prepared when they reach the university level The chapter by Taagepera and Arasasingham deals with the application of knowledge spaces independent of ALEKS to the teaching of college chemistry The four chapters by Albert and his collaborators strive to give cognitive interpretations to the combinatoric structures obtained and used by the ALEKS system The contribution by Eppstein is technical and develops means of searching the knowledge structure efficiently   Design Recommendations for
