In astrophysics models are used to make predictions to be compared to observations. These observations offer information that is incomplete and uncertain so the comparison has to be pursued by following a probabilistic approach. With contributions from leading experts, this volume covers the foundations of Bayesian inference, a description of computational methods and recent results from their application to areas such as exoplanet detection and characterisation, image reconstruction and cosmology. It appeals to both young researchers seeking to learn about Bayesian methods as well as to astronomers wishing to incorporate these approaches in their research areas. It provides the next generation of researchers with the tools of modern data analysis that are already becoming standard in current astrophysical research. **The Bookseller and the Stationery Trades' Journal**, 1893 Official organ of the book trade of the United Kingdom **The Journal of Education**, 1901 **The Athenaeum**, 1910 **Athenaeum and Literary Chronicle**, 1910 The Bookseller, 1912 **The Publishers' Circular and Booksellers' Record of British and Foreign Literature**, 1892 **Nature**, 1881
