Fluidization Engineering D. Kunii, Octave Levenspiel, 1991-10-25 Focuses on the major research developments which are pertinent to engineers concerned with predictive methods and design of fluidization beds Fluidization Engineering Daizō Kunii, Octave Levenspiel, 1977 **Fluidization Engineering** D. Kunii, Octave Levenspiel, 1969-01-15 **Fluidization engineering** Daizo Kunii, 1977 *Handbook of Fluidization and Fluid-Particle Systems* Wen-Ching Yang, 2003-03-19 This reference details particle characterization dynamics manufacturing handling and processing for the employment of multiphase reactors as well as procedures in reactor scale up and design for applications in the chemical mineral petroleum power cement and pharmaceuticals industries The authors discuss flow through fixed beds elutriation and entrainment gas distributor and plenum design in fluidized beds effect of internal tubes and baffles general approaches to reactor design applications for gasifiers and combustors dilute phase pneumatic conveying and applications for chemical production and processing This is a valuable guide for chemists and engineers to use in their day to day work Chemical Reactor Modeling Hugo A. Jakobsen, 2008-10-15 Chemical Reactor Modeling closes the gap between Chemical Reaction Engineering and Fluid Mechanics It presents the fundamentals of the single fluid and multi fluid models for the analysis of single and multiphase reactive flows in chemical reactors with a chemical reactor engineering rather than mathematical bias The book discusses numerical methods for solving the resulting equations as well as the interplay between physical and numerical modes It is organized in 12 chapters combining theoretical aspects and practical applications and covers some of the recent research in several areas of chemical reactor engineering This book contains a survey of the modern literature in the field of chemical reactor modeling The book is written by a Chemical Engineer for Chemical Process Engineers using the standard terminology of this community It is intended for researchers and engineers who want to develop their own codes or who are interested in a deeper insight into commercial CFD codes in order to derive consistent extensions and to overcome black box practice It can also serve as a textbook and reference book for both students and practitioners Introduction to Biomass Energy Conversions Sergio Capareda, 2023-11-07 Introduction to Biomass Energy Conversions explores biomass energy conversions and characterization using practical examples and real world scenarios It begins with biomass resource estimation and extends to commercialization pathways for economical biomass conversion into high value materials chemicals and fuels With extended discussions of new sustainability issues in biofuels production such as carbon capture and sequestration the second edition has been updated with carbon footprint work life cycle analysis the growing circular economy and newer research directions of biomass resources such as graphene production from biochar This book covers thermo chemical conversion processes including torrefaction pyrolysis gasification and advanced gasification biomass liquefaction and combustion This book is intended for senior undergraduate students taking Renewable Energy Conversions Bio Energy Biomass Energy Introduction to Biofuels and Sustainability Engineering courses This book also features end of

chapter problems exercises and case studies with a Solutions Manual available for instructors The eBook version includes the following digital enhancements Audio player Students can listen to an audio overview at the start of each chapter Pop ups Students can hover over important technical terms and keywords to instantly view definitions and actual images such as of biomass materials products equipment and pilot facilities Problem solving and objective type questions Over 450 questions are included Multiple choice quiz items with answers and solutions are provided at the end of each chapter These quizzes are carefully designed to satisfy all the key learning objectives for each chapter Indices for commonly used units and conversions and glossary of terms used in biomass conversion systems are provided to aid the students in problem solving Case studies Students will tackle case studies on bioenergy techno economics and feasibility particularly for biodiesel bioethanol and biogas productions as well as pyrolysis and gasification systems MS Excel templates are provided to conduct economic sensitivity analysis for each project Included in the case study package are short videos to guide the students on how to navigate through each case study project

Reaction Kinetics and Reactor Design, Second Edition John B. Butt, 2000-01-03 This text combines a description of the origin and use of fundamental chemical kinetics through an assessment of realistic reactor problems with an expanded discussion of kinetics and its relation to chemical thermodynamics It provides exercises open ended situations drawing on creative thinking and worked out examples A solutions manual is also available to instructors

Chemical Reactor Design Peter Harriott, 2002-11-06 Featuring case studies and worked examples that illustrate key concepts in the text this book contains guidelines for scaleup of laboratory and pilot plant results methods to derive the correct reaction order activation energy or kinetic model from laboratory tests and theories correlations and practical examples for 2 and 3 phase reaction
