Practical Synthesis of High-Performance Analog Circuits Emil S. Ochotta, Tamal Mukherjee, Rob A. Rutenbar, L. Richard Carley, 2012-12-06 Practical Synthesis of High Performance Analog Circuits presents a technique for automating the design of analog circuits Market competition and the astounding pace of technological innovation exert tremendous pressure on circuit design engineers to turn ideas into products quickly and get them to market In digital Application Specific Integrated Circuit ASIC design computer aided design CAD tools have substantially eased this pressure by automating many of the laborious steps in the design process thereby allowing the designer to maximise his design expertise But the world is not solely digital Cellular telephones magnetic disk drives neural networks and speech recognition systems are a few of the recent technological innovations that rely on a core of analog circuitry and exploit the density and performance of mixed analog digital ASICs To maximize profit these mixed signal ASICs must also make it to market as quickly as possible However although the engineer working on the digital portion of the ASIC can rely on sophisticated CAD tools to automate much of the design process there is little help for the engineer working on the analog portion of the chip With the exception of simulators to verify the circuit design when it is complete there are almost no general purpose CAD tools that an analog design engineer can take advantage of to automate the analog design flow and reduce his time to market Practical Synthesis of High Performance Analog Circuits presents a new variation tolerant analog synthesis strategy that is a significant step towards ending the wait for a practical analog synthesis tool A new synthesis strategy is presented that can fully automate the path from a circuit topology and performance specifications to a sized variation tolerant circuit schematic This strategy relies on asymptotic waveform evaluation to predict circuit performance and simulated annealing to solve a novel non linear infinite programming optimization formulation of the circuit synthesis problem via a sequence of smaller optimization problems Practical Synthesis of High Performance Analog Circuits will be of interest to analog circuit designers CAD EDA industry professionals academics and students **Bulletin Year Book ... and Citizens' Manual of Philadelphia** ,1927

Predicting Species Occurrences J. Michael Scott, Patricia Heglund, Michael L. Morrison, 2002-02 Predictions about where different species are where they are not and how they move across a landscape or respond to human activities if timber is harvested for instance or stream flow altered are important aspects of the work of wildlife biologists land managers and the agencies and policymakers that govern natural resources Despite the increased use and importance of model predictions these predictions are seldom tested and have unknown levels of accuracy Predicting Species Occurrences addresses those concerns highlighting for managers and researchers the strengths and weaknesses of current approaches as well as the magnitude of the research required to improve or test predictions of currently used models The book is an outgrowth of an international symposium held in October 1999 that brought together scientists and researchers at the forefront of efforts to process information about species at different spatial and temporal scales It is a comprehensive reference that offers an exhaustive treatment of the subject with 65 chapters by leading experts from around the world that review the history of the theory and practice of modeling and present a standard terminology examine temporal and spatial scales in terms of their influence on patterns and processes of species

distribution offer detailed discussions of state of the art modeling tools and descriptions of methods for assessing model accuracy discuss how to predict species presence and abundance present examples of how spatially explicit data on demographics can provide important information for managers An introductory chapter by Michael A Huston examines the ecological context in which predictions of species occurrences are made and a concluding chapter by John A Wiens offers an insightful review and synthesis of the topics examined along with guidance for future directions and cautions regarding misuse of models Other contributors include Michael P Austin Barry R Noon Alan H Fielding Michael Goodchild Brian A Maurer John T Rotenberry Paul Angermeier Pierre R Vernier and more than a hundred others Predicting Species Occurrences offers important new information about many of the topics raised in the seminal volume Wildlife 2000 University of Wisconsin Press 1986 and will be the standard reference on this subject for years to come Its state of the art assessment will play a key role in guiding the continued development and application of tools for making accurate predictions and is an indispensable volume for anyone engaged in species management or conservation *Power and the Engineer* ,1952
