

Karyotype Activity Worksheet

Background: Karyotyping is routinely used to diagnose disorders caused by abnormal chromosomes. A **karyotype** is the arrangement and classification of the complete set of chromosomes in an individual. Cells are suspended while in mitosis, when the chromosomes have condensed and are easily visualized using a light microscope. A dye is introduced to the cell, which stains certain regions of the chromosomes, producing a banding pattern (also called "G-bands"). An image is taken of the chromosomes, and they are digitally rearranged so that members of each pair are next to each other and chromosomes are arranged according to size. The analysis involves comparing chromosome number, length, placement of the centromere, and the banding pattern. Below is an example of a karyotype taken from a normal individual.

Modified with permission from the National Human Genome Research Institute

1. How are the chromosomes arranged?
2. Is this karyotype of a male or female individual?
