Biochemical Education Charles F. Bryce, 2012-12-06 The purpose of the present text is to distil the experience of a number of workers active in the field of biochemical education so providing readable accounts which it is hoped will be of significant benefit to those who are new to the teaching profession in addition to those who may be stimulated to experiment with alternative strategies in their own teaching situation From the various contributions considered in this book each topic in its widest sense would warrant at least a volume on its own and indeed such texts are currently available However it was felt more appropriate to restrict the coverage to those aspects which are of particular use to the subject of biochemistry and for which work in this area has already achieved some measure of success In effect what each of us is doing is supplying findings from a body of knowledge collectively called educational technology Without entering the debate on the semantics of what educational technology is or is not it doesn't take long to realise that like the vast majority of subject areas it has its own unique terminologies and vocabulary Whilst it is inevitable that such terms will appear throughout the text hopefully all will be explained on first use and so it is not envisaged that this will be too distractive to the reader

Futurology In Education And Learning Cosmina L Voinea, Nadine Roijackers, 2022-12-20 The book represents an accessible and comprehensive point of reference for both the academic and the practitioner world in showing how education can be transformed and innovated to become more sustainable and resilient The recent covid crisis shows that the education system and approaches used are not sustainable but can be ambushed and reactive How can we in the present determine what we should learn to be prepared for the future How can education be changed so that we learn more quickly and more effectively Not only focusing on new methods technologies but also on innovation of the learning process How to use the experience to create future proof education and how certain innovations in education play a role in this transition These are some of the questions answered in the book It represents an overview of the state of affairs of innovative techniques used in education from both distance and face to face education The topic of innovation is highly relevant for both the business world and a challenging and complex subject for the education industry This is a unique book that offers new empirical insights for practitioners and policy makers of the field Our approach in designing this book was a critical reflection of field expertise and scholarly experience tailored to the knowledge needs dictated by the novelty and complexity of the topic
