

G20 SERIES UNITS

INTRODUCTION/APPLICATION

G20 and G20E series units are mid-efficiency gas furnaces manufactured with Duracurvet heat exchangers formed of either cold rolled or aluminized steel. G20 units come in heating capacities of 50,000 to 150,000 Btuh and cooling applications up to 6 tons. Refer to Engineering Handbook for proper sizing.

Units are factory supplied for use with natural gas. A kit is available for conversion to LPG operation. The G20 unit is equipped with a standing pilot. G20E units use an electronic ignition. G20X units use electronic ignition and meet the California Nitrogen Oxides (NO_x) Standards and California Seasonal Efficiency requirements. G20X series units use only natural gas. All units use a redundant gas valve to assure safety shut-off as required by A.G.A.

Featured on G20 series is a burner box damper assembly located on the intake side of the burners. A damper door in the burner box shuts during unit off cycles to retain heat in the unit. A damper prove switch ensures that damper is open before gas valve is energized. Since the G20 furnaces have atmospheric burners there is no induced draft motor. All G20 units use a draft diverter which allows the use of standard single wall vent connectors.

This manual is divided into sections which discuss the major components, electronic ignition module, maintenance and operation sequences.

All specifications in this manual are subject to change.
