**Specification and Verification of Concurrent Systems** Charles Rattray, 2013-11-11 This volume contains papers presented at the BCS FACS Workshop on

Specification and Verification of Concurrent Systems held on 6-8 July 1988 at the University of Stirling Scotland. Specification and verification techniques are playing an increasingly important role in the design and production of practical concurrent systems. The wider application of these techniques serves to identify difficult problems that require new approaches to their solution and further developments in specification and verification. The Workshop aimed to capture this interplay by providing a forum for the exchange of the experience of academic and industrial experts in the field. Presentations included surveys, original research, practical experience with methods, tools and environments in the following or related areas: Object oriented process data and logic based models and specification methods for concurrent systems; Verification of concurrent systems; Tools and environments for the analysis of concurrent systems; Applications of specification languages to practical concurrent system design and development. We should like to thank the invited speakers and all the authors of the papers whose work contributed to making the Workshop such a success. We were particularly pleased with the international response to our call for papers. Invited Speakers: Pierre America, Philips Research Laboratories, University of Warwick; Professor M. Joseph David Freestone, British Telecom; Organising Committee: Charles Rattray, Dr Muffy Thomas, Dr Simon Jones, Dr John Cooke, Professor Ken Turner, Derek Coleman, Maurice Naftalin, Dr Peter Scharbach. vi Preface. We would like to acknowledge the financial contribution made by SD Systems Designers, Camberley, Surrey. Early English Text Society, 1877. The theory of semigroups is a relatively young branch of mathematics with most of the major results having appeared after the Second World War. This book describes the evolution of algebraic semigroup theory from its earliest origins to the establishment of a full fledged theory. Semigroup theory might be termed Cold War mathematics because of the time during which it developed. There were thriving schools on both sides of the Iron Curtain although the two sides were not always able to communicate with each other or even gain access to the other's publications. A major theme of this book is the comparison of the approaches to the subject of mathematicians in East and West and the study of the extent to which contact between the two sides was possible. **The Mystery of the 13th Floor**, Lee Thayer, 1919. **Poems of Oliver Wendell Holmes**, Oliver Wendell Holmes, 1880.
