*Financial Management* Maxime Sottini, 2017-01-01 It is now accepted that IT functions are a fundamental part of the competitive business model. Instead of simply offering services, IT must create value for the business. This practical title describes the strong financial skills that IT managers must have in order to support Operations Finance departments, which rely heavily on IT managers being able to identify, track and measure costs, sometimes at a very granular level. Budgeting the very technical nature of IT operations means that budgeting can be more complex than many other areas. Project Delivery large technical project deliveries means that costs can be correspondingly complex to account for. Business Modeling pricing models rely heavily on IT managers' skills and accuracy. Where one service supports many commercial offerings, a strong model is needed to apportion costs appropriately. Investment and business cases: a sound understanding of the financial contribution the IT assets make to the overall business is critical to gain support for ongoing investment. This outstanding title covers the main financial concepts that managers need to be familiar with in order for IT to take its proper senior place as a contributor to the business. It assumes a basic level of financial understanding and builds on the techniques required almost daily; therefore, it is overwhelmingly practical and based on real world scenarios. Not only are the techniques fully described, but issues such as roles, implementation, daily management and even tooling are detailed. **ITIL Lifecycle**

ITIL is based upon a lifecycle approach and the core guidance consists of five publications: ITIL Service Strategy, ITIL Service Design, ITIL Service Transition, ITIL Service Operation, ITIL Continual Service Improvement. Each of the five publications represents a stage in the ITIL service lifecycle. With each stage influencing and relying upon the others, the lifecycle moves cyclically from service strategy, where the business requirements are set, to the design, transition, operation and continual improvement of IT services. The lifecycle is driven by business needs and requirements and has a continual feedback system built into every stage to ensure that an organization's service management offering continues to provide measurable value to the business.

The process based framework of the service lifecycle can be adopted and adapted by organizations of all types and sizes
