

Lab Exercise 38.C: Evidence of Hereditary Material

Some studies have shown that cells of a single bacterial culture, when independently subjected to independent generations, show hereditary effects in subsequent generations. In fact, it is well established in microbiology that independent generations of a single bacterial culture should indicate the presence of a hereditary factor that is passed on to successive generations. In this experiment, you will observe the results of a culture that is passed on to successive generations (Figure 38).

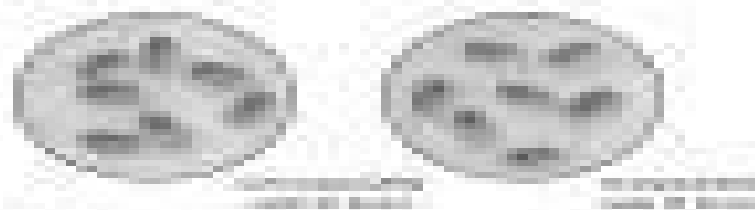

Figure 38
Control and experimental petri dishes showing bacterial growth.

The following is an abbreviated summary of Spent's procedure for the experiment.

Procedure:

1. Prepare a bacterial culture and use a pipette to transfer 100 µl of the culture to a petri dish and incubate for 24 hours.
2. Prepare a bacterial culture and use a pipette to transfer 100 µl of the culture to a petri dish and incubate for 24 hours.

Control and experimental petri dishes showing bacterial growth.

3. Prepare a bacterial culture and use a pipette to transfer 100 µl of the culture to a petri dish and incubate for 24 hours. The culture should show a uniform, dense growth of bacteria. This result is the control culture and is shown in Figure 39.
