Diagram of the Human Respiratory System

The diagram illustrates the human respiratory system, showing the pathway of air from the atmosphere to the lungs and back out. The main components are labeled as follows:

- Atmosphere**: The source of inhaled air.
- Nose**: The entry point for air into the respiratory system.
- Trachea**: The windpipe, which carries air into the lungs.
- Bronchi**: The airways that branch out from the trachea into the lungs.
- Alveoli**: The small air sacs in the lungs where gas exchange occurs.
- Diaphragm**: The muscle that contracts and relaxes to facilitate breathing.

The process of breathing is shown in two stages:

- Inhalation**: Air enters the trachea, moves into the bronchi, and then into the alveoli. Oxygen is absorbed into the blood.
- Exhalation**: Air moves out of the alveoli, through the bronchi, and out of the trachea. Carbon dioxide is removed from the blood.

The diagram also includes a box on the left listing the components of the respiratory system: trachea, bronchi, alveoli, and diaphragm. A box on the right lists the functions of the respiratory system: to take in oxygen and to get rid of carbon dioxide. A box at the bottom left lists the steps of the respiratory process: 1. Air enters the trachea, 2. Air moves into the bronchi, 3. Air moves into the alveoli, 4. Oxygen is absorbed into the blood, 5. Carbon dioxide is removed from the blood.

The flowchart illustrates the progression of liver disease. It begins with two primary causes: Alcohol and Hepatitis B virus, both of which lead to Cirrhosis. From Cirrhosis, the disease can progress to either Liver failure or Portal hypertension. Portal hypertension further leads to Ascites and Hepatic encephalopathy. Finally, Hepatic encephalopathy can lead to Coma. The diagram uses liver icons to represent the state of the liver at each stage: normal liver for Liver failure, and liver with red areas for Portal hypertension, Ascites, Hepatic encephalopathy, and Coma.
