early 1920s of the greatest influenza pandemic in history direct encounters with FM1 virus at Fort Monmouth in 1947 the
care of influenza patients in the 1950s the pursuit of the influenza virus through the modern pandemics of 1957 and 1968
and a present in which the genes of the virus have dissembled in the DNA of vaccinia virus and Escherichia coli through the
wand of high tech If my corpus could be fossilized for archival and archaeological purposes it would be found to contain
immune cells branded with the imprint of the swine influenza virus of post 1918 and brain cells no less imprinted with
memories of the abortive return of its descendant during America's bicentennial But before that unlikely event I wanted to
try to make some sense out of this baffling disease and its viruses expecting no definitive revelations but hoping for a
sharper definition of problems Hence this book It is an audacious act in these days of specialization to essay a book such as
this singlehandedly but I have done so for selfish reasons I wanted to reexamine old questions about the nature of influenza
and its epidemics in the light of the dazzling advances in molecular biology of the past few years No virus has been better
studied but few diseases are less well understood **Selected Papers on Optical Neural Networks** Suganda
