Goldsmith, 2019-03-25 The purpose of this book specifically is to teach surgeons academic or community surgical fellows and surgical residents regardless of the surgical specialty the skills to appraise what they read in the surgical literature Surgeons need to be able to understand what they read before applying the conclusions of a surgical article to their practice As most surgeons do not have the extra training in health research methodology understanding how the research was done how to interpret the results and finally deciding to apply them to the patient level is indeed a difficult task Chapters explain the methodological issues pertaining to the various study designs reported in the surgical literature Most chapters begin with a clinical scenario with uncertain course of action with which most surgeons are struggling Readers are taught how to search the literature for the best evidence that will answer the surgical problem under discussion An identified article that seems relevant to the problem you are investigating can be appraised by addressing 3 key questions 1 Is the study I am reading valid 2 What are the results of this study 3 Can I apply these results to my patients While the primary goal of Evidence Based

Additionally, many universities and educational institutions have their own digital libraries that provide free access to PDF books and manuals. These libraries often offer academic texts, research papers, and technical manuals, making them invaluable resources for students and researchers.
