plants go through the process of photosynthesis. Which allows for plants to take in sunlight, water, and carbon dioxide to turn into food for us. Different environmental factors affect how this process can work. I am going to investigate how exposure to basic needs affects how a plant grows.

- Each grow our own cup of lima beans with exposure to all basic needs.
- Have 1 cup of lima beans that doesn't have exposure to sunlight.
- Have 1 cup of lima beans that doesn't have exposure to air.
- Have 1 cup of lima beans that doesn't have exposure to water.
- We will compare and track our progress to see if there will be a difference.

Will our lima beans be able to grow if not given their basic needs of sunlight, carbon dioxide and water? Write down your hypothesis.

Record your observations of the different time-beam environments over time.
