The present volume contains all the exercises and their solutions of Lang's Linear Algebra Solving problems being an
essential part of the learning process my goal is to provide those learning and teaching linear algebra with a large number of
worked out exercises Lang's textbook covers all the topics in linear algebra that are usually taught at the undergraduate
level vector spaces matrices and linear maps including eigenvectors and eigenvalues determinants diagonalization of
symmetric and hermitian maps unitary maps and matrices triangulation Jordan canonical form and convex sets Therefore this
solutions manual can be helpful to anyone learning or teaching linear algebra at the college level As the understanding of the
first chapters is essential to the comprehension of the later more involved chapters I encourage the reader to work through
all of the problems of Chapters I II III and IV Often earlier exercises are useful in solving later problems For example
Exercise 35 3 of Chapter II shows that a strictly upper triangular matrix is nilpotent and this result is then used in Exercise 7
1 of Chapter X To make the solutions concise I have included only the necessary arguments the reader may have to fill in the
details to get complete proofs Finally I thank Serge Lang for giving me the opportunity to work on this solutions manual and I
also thank my brother Karim and Steve Miller for their helpful comments and their support **Transputer Applications**
