Keith Nicholson's *Linear Algebra with Applications* Fifth Canadian Edition is written for first and second year students at both the college or university level. While some instructors will use the text for one semester ending at Chapter 5 The Vector Space \mathbb{R}^n others will continue with more abstract concepts being introduced. Chapter 5 prepares students for the transition acting as the bridging chapter allowing challenging concepts like subspaces, spanning, independence and dimension to be assimilated first in the concrete context of \mathbb{R}^n . This bridging concept eases students into the introduction of vector spaces in Chapter 6.

Overall the aim of the text is to achieve a balance among computational skills, theory and applications of linear algebra. It is a relatively advanced introduction to the ideas and techniques of linear algebra targeted for science and engineering students who need to understand not only how to use these methods but also gain insight into why they work.
