Nature Journal Impact Factor:

Unreliable Csaba Szabo, 2025-03-11 Reproducibility is fundamental to the scientific method After reading a paper describing research findings a scientist should be able to repeat the experiment and obtain the same results Yet an alarming number perhaps as high as 90 percent of published biomedical research papers face challenges in independent replication Such issues range from honest mistakes to outright fraud The scope of this crisis however underscores deeper systemic issues within the scientific community its culture incentives and institutions In *Unreliable* the distinguished scientist Csaba Szabo examines the causes and consequences of the reproducibility crisis in biomedical research showing why the factors that encourage misconduct stem from flaws in real world science There are many culprits including commonplace research methods and dubious statistical techniques Academic career incentives hypercompetition for grant funding and a bias toward publishing positive results have exacerbated the problem Deliberate data manipulation and fabricated findings churned out by paper mills are disturbingly common Academic institutions and publishers for their part have perpetuated a culture of impunity Szabo explores how these failures have hindered scientific progress and impeded the development of new treatments and he introduces readers to the science sleuths who tirelessly uncover misconduct He proposes comprehensive reforms from scientific training to the grant system through the publication process to address the root causes of the crisis Written in clear language and leavened with a keen sense of irony *Unreliable* is an essential account of the reproducibility crisis that gives readers an inside look at how science is actually done

The Nature of Scientific Innovation, Volume I

David Dent, 2024-12-01 Innovation is a major driver of social economic and environmental change and is researched extensively by academics from disciplines as diverse as business engineering economics sociology and psychology On the whole each discipline pursues its own pathway to understanding without an interdisciplinary framework that links diverse research outputs This partite structure creates a remove from the practical realities of entrepreneurship and the innovators who operate and perceive innovation in its entirety This book delivers insights and creates a different framework one that includes terminologies and typologies greater understanding of paradigmatic influences in science needs vs wants and demand impact and value of knowledge publications and patents and economic benefits It challenges current approaches to education research creativity and skills development infrastructure investment and policy This book addresses changes needed to better deliver innovation at a time when the world is desperate for solutions to global problems It will be of interest to scholars and students of innovation from multiple disciplines as well as practitioners policymakers and all those with an interest in scientific innovation The first volume focuses on the processes the means and the impact of scientific innovation It highlights the way scientific research came to the fore as an instrument of government policy for economic growth the way research is undertaken the structures and processes involved the values biases and limitations associated with them and why these matter for innovation Questions are asked about who innovation is for and whether value is being

captured in ways that really matter whether the systems are fit for purpose and how meaningful impact could be delivered to meet societal economic and environmental needs and priorities
