Pucker or Puckering is the most used abused term in the garment manufacturing industry Pick up any quality controllers report and the first thing that will strike your eye will be Puckering in armhole Puckering in neckline

binding control Puckering in bottom hem the list is endless Buying office quality controllers are as enamoured of this term as much as manufacturers abhor it What is it that makes it so distasteful Why does it occur How can it be controlled While there are numerous leaflets documents and articles available on pucker we have found that the majority of them lay great stress on inherent pucker only material parameters In this booklet have tried to include process parameters as well as sewing of lightweight fabrics All said and done the problem is so intricately interdependent that exhaustive compilation is well nigh impossible We are sure this booklet will help manufacturers to understand the rationale behind this publication and we will consider our effort successful if enthusiastic readers regularly inform us about newer methods to tackle the problem
