Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Instead of a control lever, an electrical motor can operate the drive control technology, instead of a hydraulic actuator, a computer electronic controller instead with a very powerful microcontroller performs all control functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive concepts. To use different truck parameters and sensors, each truck model has to be adapted, that already identifies the truck.

Troubleshooting

The processor of the electronic control unit analyses analogue and digital signals. The processor interprets digital messages and system errors, and displays an error message on the display/monitor on the user interface. In addition, the control unit activates a variety of functions according to the user's request.

- Working light function
- Automatic detection of the manual emergency stop
- The truck brakes with automatic detection and off the engine brake
- The manual brake as the emergency function, the manual emergency stop activates off
- An error code appears on display

These functions can be activated by switching off the emergency stop and the engine brake. During a fault, the control unit shows whether the error is still present. If the error is no longer present, the truck resumes normal operation. If the error persists, the error code appears on the display and one of the recovery functions is activated.

Changing the controller

4.1.1.1.1.1

Problems regarding component damage due to electrostatic discharge (ESD) damage to working elements will occur if the controller is moved.

The controller is equipped with a "float plug" which is attached to the back to avoid static damage. Connections must never be left open. The upper part number and the software version of the controller can be read out via the back connector.

If the controller is replaced, the permitted work unit controller must be identified and plug adapted to the cable harness. All necessary information is available on the cable harness.
