*Million Dollar Data: Building Confidence - Vol.1* Stephen DeMeo, 2020-07-31 Global warming our current and greatest challenge is without precedent Among the many consequences that are impacting our society one unanticipated concern involves scientific truth When the President of the United States and others in his administration declare that global warming is fake science it calls into question what real science is and what real school science should be I will argue that real science is quality science one that is based on the rigorous collection of reliable and valid data To collect quality data requires bending over backwards to get things right and this is exactly what makes science so special Truth is made when scientists go this extra yard and devise controlled experiments collect large data sets confirm the data and rationally analyze their results Making scientific truth sounds difficult to do in the science laboratory but in reality there are many straightforward ways that truth can be constructed In the first of two volumes I discuss twelve such ways I call them Confidence Indicators that can allow students to strongly believe in their data and their subsequent results Many of these methods are intuitive and can be used by young students on the late elementary level all the way up to those taking introductory college science courses As in life science is not without doubt In the second volume I introduce the concept of scientific uncertainty and the indicators used to calculate its magnitude I will show that science is about connecting confidence with uncertainty in a specific manner what I refer to as the Confidence Uncertainty Continuum expression This important relationship epitomizes the scientific enterprise as a search for probabilistic rather than absolute truth This two volume set will contain a variety of ways that data quality can be instituted into a science curriculum To support its use many of the examples that I will present involve science teachers as well as student work and feedback from different grade levels and in different scientific disciplines Specific chapters will be devoted to reviewing the academic literature on data quality as well as describing my own personal research on this important but often neglected topic [Advances in Human Error, Reliability, Resilience, and Performance](#) Ronald L. Boring, 2018-06-23 This book brings together studies broadly addressing human error from different disciplines and perspectives It discusses topics such as human performance human variability and reliability analysis medical driver and pilot error as well as automation error root cause analyses and the cognitive modeling of human error In addition it highlights cutting edge applications in safety management defense security transportation process controls and medicine as well as more traditional fields of application Based on the AHFE 2018 International Conference on Human Error Reliability Resilience and Performance held on July 21 25 2018 in Orlando Florida USA the book includes experimental papers original reviews and reports on case studies as well as meta analyses technical guidelines best practice and methodological papers It offers a timely reference guide for researchers and practitioners dealing with human error in a diverse range of fields **Strains in Ironwork** Henry Adams, 1898 *National History Standards* Linda Symcox, Arie Wilschut, 2009-04-01 As educators in the United States and Europe develop national history standards for K 12 students the

question of what to do with national history canons is a subject of growing concern Should national canons still be the foundation for the teaching of history Do national canons develop citizenship or should they be modified to accommodate the new realities of globalization Or should they even be discarded outright These questions become blurred by the debates over preserving national heritages by so called history wars or culture wars and by debates over which pedagogical frameworks to use These canon and pedagogical debates often overlap creating even more confusion A misconceived skills vs content debate often results Teaching students to think chronologically and historically is not the same as teaching a national heritage or a cosmopolitan outlook But what exactly is the difference Policy makers and opinion leaders often confuse the pedagogical desirability of using a framework for studying history with their own efforts to reaffirm the centrality of national identity rooted in a vision of their nation s history as a way of inculcating citizenship and patriotism These are the issues discussed in this volume Today s students are citizens of the world and must be taught to think in global supranational terms At the same time the traditionalists have a point when they argue that the ideal of the nation state is the cultural glue that has traditionally held society together and that social cohesion depends on creating and inculcating a common national culture in the schools From an educational perspective the problem is how to teach chronological thinking at all How are we to reconcile the social political and intellectual realities of a globalizing world with the continuing need for individuals to function locally as citizens of a nation state who share a common past a common culture and a common political destiny Is it a duty of history education to create a frame of reference and if so what kind of frame of reference should this be How does frame of reference knowledge relate to canonical knowledge and the body of knowledge of history as a whole

**Designed to Fail** Roseann Liu, 2024-03-20 A provocative examination of how systemic racism in education funding is sustained For people who care about urban school districts like Philadelphia s addressing the challenges that these schools face often boils down to the need for more money But why are urban districts that serve Black and Brown students still so perennially underfunded compared to majority white ones Why is racial equity in school funding so hard to achieve In **Designed to Fail** Roseann Liu provides an inside look at the Pennsylvania state legislature and campaigns for fair funding to show how those responsible for the distribution of school funding work to maintain the privileges of majority white school districts Liu analyzes how colorblind policies political structures and the maintenance of the status quo by people in power perpetuate wide and deepening racial disparities in education funding Taking a lesson from community organizers fighting for a racially equitable school funding system Liu s work is a bold call to address structural racism at the root and organize from a place of abundant justice
