solutions metaheuristic algorithms genetic search algorithms and evolution strategies decomposition algorithms hybridization of different metaheuristics and many objective more than three objectives optimization and parallel computation The final section of the book presents information about the design and types of fifty test problems for which the Pareto optimal front is approximated For each of them the package NSGA II is used to approximate the Pareto optimal front It is an essential handbook for students and teachers involved in advanced optimization courses in engineering information science and mathematics degree programs

Nature Inspired Cooperative Strategies for Optimization (NICSO 2008)
 Natalio Krasnogor, Belén Melián-Batista, José A. Moreno-Pérez, J. Marcos Moreno-Vega, David Alejandro Pelta, 2009-10-04 The inspiration from Biology and the Natural Evolution process has become a research area within computer science For instance the description of the artificial neuron given by McCulloch and Pitts was inspired from biological observations of neural mechanisms the power of evolution in nature in the diverse species that make up our world has been related to a particular form of problem solving based on the idea of survival of the fittest similarly artificial immune systems ant colony optimisation automated self assembling programming membrane computing etc also have their roots in natural phenomena The first and second editions of the International Workshop on Nature Inspired Cooperative Strategies for Optimization NICSO were held in Granada Spain 2006 and in Acireale Italy 2007 respectively As in these two previous editions the aim of NICSO 2008 held in Tenerife Spain was to provide a forum where the latest ideas and state of the art research related to nature inspired cooperative strategies for problem solving were discussed The contributions collected in this book were strictly peer reviewed by at least three members of the international programme committee to whom we are indebted for their support and assistance The topics covered by the contributions include nature inspired techniques like Genetic Algorithms Ant Colonies Amorphous Computing Artificial Immune Systems Evolutionary Robotics Evolvable Systems Membrane Computing Quantum Computing Software Self Assembly Swarm Intelligence etc

Designing Worldwide Clinical Trials with Multiple Objectives Using Nature-Inspired Metaheuristic Algorithms Mitchell Aaron Schepps, 2023 Problems in healthcare and medicine are worldwide and multifaceted This dissertation explores optimal and efficient designs in global and other important clinical trials with nature inspired metaheuristic algorithms The primary objective of this research is to showcase novel uses of metaheuristics in two real world applications first we collaborate with physicians and help patients with bipolar disorder by designing optimal sampling times for sustained release lithium a vital medication using pharmacokinetics pharmacodynamics nonlinear mixed effects models and second to optimize worldwide clinical trial patient recruitment plans within tight real world complex regulatory and budgetary constraints We determine interesting optimal designs using metaheuristics in both single and multiple objective situations with complex constraints We show systematic analyses which can be used to solve and enhance the implementation and interpretability of the discussed real life clinical trial designs The results from this dissertation are implemented in current software and offer novel insights into the design of experiments and patient
