practically writing codes using JavaScript except that you use the library of jQuery If you already have a Web page but you want to include some JavaScript codes in it so that it would run better you can either add codes inline within your script tag or you can make an external file in JavaScript using the js extension in your file name before loading it through your script tag With regard to the syntax of JavaScript it is pretty clear and basic Then again there are still some subtleties that you must expect As you go on writing codes and programs using this programming language you will encounter these subtleties Oftentimes there are a variety of ways on how you can do and achieve things However the community still insists on certain conventions The use of semicolons is an example of this In JavaScript the use of semicolon at the last part of your line is usually optional Nevertheless you have to add a semicolon at the last part of your line at all times if you wish to follow the convention This is especially the case if you re working with a team or if other people will be taking a close look at your code jQuery is such an amazing programming language It can certainly help improve your website as well as enable you to create programs for a variety of purposes Here s What You ll Learn From This jQuery For Beginners Book Introduction Chapter 1 Introduction to jQuery Chapter 2 Getting Started Chapter 3 Accessing the Elements Chapter 4 HTML Elements Positions and Attributes Chapter 5 Events Management Chapter 6 Showing and Hiding Web Page Elements Chapter 7 Fading and Sliding Web Page Elements Chapter 8 Web Page Element Animation What Are You Waiting For Start Coding jQuery Right Now
