Human Information Processing Douglas Vickers, Philip L. Smith, 1989 The contributions in this volume report research on various aspects of the processing of information by human beings The papers reflect orientations ranging from the broadly ecological to the highly abstract and formal Their substantive concerns encompass questions of perception action and the mechanisms which mediate between them and the papers are characterised generally by a close relationship between empirical findings and theoretical issues This selection of papers on various aspects of human information processing reflects orientations ranging from the broadly ecological to the highly abstract and formal The papers encompass questions of perception action and the mechanisms which mediate between them and are characterised generally by a close relationship between empirical findings and theoretical issues The papers fall into five main groups The first is concerned with sensory and perceptual mechanisms and with the adaptation and control of physical movement the second is concerned with the elementary processing of stimulus representation the third with computational models of the processes involved in memorizing recognizing and

recalling information the fourth small group is concerned with the modelling of more molar decision behaviour and finally the fifth group is predominantly concerned with attempts to derive measures of intellectual performance which have explicit relationships to a theoretical account of elementary cognitive activity

Modern Developments in Vacuum Electron Sources Georg Gaertner, Wolfram Knapp, Richard G. Forbes, 2020-10-09 This book gives an overview of modern cathodes and electron emitters for vacuum tubes and vacuum electron devices in general It covers the latest developments in field emission theory as well as new methods towards improving thermionic and cold cathodes It addresses thermionic cathodes such as oxide cathodes impregnated and scandate cathodes as well as photocathodes and field emitters the latter comprising carbon nanotubes graphene and Spindt type emitter arrays Despite the rise and fall of the once dominant types of vacuum tubes such as radio valves and cathode ray tubes cathodes are continually being improved upon as new applications with increased demands arise for example in electron beam lithography high power and high frequency microwave tubes terahertz imaging and electron sources for accelerators Written by 17 experts in the field the book presents the latest developments in cathodes needed for these applications discussing the state of the art and addressing future trends

Distributed Power Amplifiers for RF and Microwave Communications Narendra Kumar, Andrei Grebennikov, 2015-06-01 This new resource presents readers with all relevant information and comprehensive design methodology of wideband amplifiers This book specifically focuses on distributed amplifiers and their main components and presents numerous RF and microwave applications including well known historical and recent architectures theoretical approaches circuit simulation and practical implementation techniques A great resource for practicing designers and engineers this book contains numerous well known and novel practical circuits architectures and theoretical approaches with detailed description of their operational principles
