characteristics characterize the specific mechanisms for urban development in Shanghai Urban Loopholes invites the reader to rethink the necessity of urban resilience in the face of globalization's impact for change The long and short of mental time travel-- self-projection over time-scales large and small James M. Broadway, Claire M. Zedelius, Jonathan W. Schooler, Simon Grondin, 2015-07-02

Researchers working in many fields of psychology and neuroscience are interested in the temporal structure of experience as well as the experience of time at scales of a few milliseconds up to a few seconds as well as days months years and beyond This Research Topic supposes that broadly speaking the field of time psychology can be organized by distinguishing between perceptual and conceptual time scales Dealing with conceptual time mental time travel also called mental simulation self projection episodic semantic memory propection foresight allows humans and perhaps other animals to imagine and plan events and experiences in their personal futures based in large part on memories of their personal pasts as well as general knowledge Moreover contents of human language and thought are fundamentally organized by a temporal dimension enmeshed with it so thoroughly that it is usually expressible only through spatial metaphors But what might such notions have to do with experienced durations of events lasting milliseconds up to a few seconds during the so called present moment of perception action cycle time This Research Topic is organized around the general premise that by considering how mental time travel might scale down to time perception and vice versa no less progress and integrative synthesis within and across scientific domains might be facilitated Bipolar configurations of future and past orientations of the self may be repeated in parallel across conceptual and perceptual time scales subsumed by a general Janus like feedforward feedback system for goal pursuit As an example it is notable that the duality of propection and semantic episodic memory operating at conceptual time scales has an analogue in perception action cycle time namely the interplay of anticipatory attention and working memory Authors from all areas of psychology and neuroscience are encouraged to submit articles of any format accepted by the journal Original Research Methods Hypothesis Theory Reviews etc which might speak to questions about time and temporal phenomena at long and or short time scales **The Conflict in**

Syria and the Failure of International Law to Protect People Globally Jeremy Julian Sarkin, 2021-11-28 This book explores through the lens of the conflict in Syria why international law and the United Nations have failed to halt conflict and massive human rights violations in many places around the world which has allowed tens of millions of people to be killed and hundreds of millions more to be harmed The work presents a critical socio legal analysis of the failures of international law and the United Nations UN to deal with mass atrocities and conflict It argues that international law in the way it is set up and operates falls short in dealing with these issues in many respects The argument is that international law is state centred rather than victim friendly is to some extent outdated is vague and often difficult to understand and therefore at times hard to apply While various accountability processes have come to the fore recently processes do not exist to assist individual victims while the conflict occurs or the abuses are being perpetrated The book focuses on the problems of international law

and the UN and in the context of the many enforced disappearances and arbitrary detentions in Syria why nothing has been done to deal with a rogue state that has regularly violated international law It examines why the responsibility to protect R2P has not been applied and why it ought to be used generally and in Syria It uses the Syrian context to evaluate the weaknesses of the system and why reform is needed It examines the UN institutional mechanisms the role they play and why a civilian protection system is needed It examines what mechanism ought to be set up to deal with the possible one million people who have been disappeared and detained in Syria The book will be a valuable resource for students academics and policy makers working in the areas of public international law international human rights law political science and peace and security studies
