## **Micromammals And Macroparasites From Evolutionary Ecology To Management:**

**Micromammals and Macroparasites** S. Morand, B.R. Krasnov, R. Poulin, 2007-01-27 Small mammals are among the most ubiquitous and important components of terrestrial ecosystems. They have coevolved and now coexist with a diverse array of parasites such that not only are all aspects of their biology influenced by parasitism but they also play key roles in the transmission and maintenance of parasitic diseases. This book provides a comprehensive survey of the diversity and biology of metazoan parasites affecting small mammals of their impact on host individuals and populations and of the management implications of these parasites for conservation biology and human welfare. Designed for a broad multidisciplinary audience it will be an essential resource for researchers, students and practitioners alike in the fields of parasitology, evolutionary ecology, wildlife management and conservation biology.

**Micromammals and Macroparasites** S. Morand, B.R. Krasnov, R. Poulin, 2009-09-03 This book provides a comprehensive survey of the diversity and biology of metazoan parasites affecting small mammals of their impact on host individuals and populations and of the management implications of these parasites for conservation biology and human welfare. Designed for a broad multidisciplinary audience the book is an essential resource for researchers, students and practitioners alike.

Micromammals and Macroparasites S. Morand, 2006 Small mammals are among the most ubiquitous and important components of terrestrial ecosystems. **New Frontiers of Molecular Epidemiology of Infectious Diseases** Serge Morand, François Beaudeau, Jacques Cabaret, 2011-09-08 Molecular epidemiology has recently broadened its focus due to the development of molecular tools but also by incorporating advances of other fields such as mathematical epidemiology, molecular ecology, population genetics and evolution. Facing new risks of emerging and re-emerging infectious diseases that are threats for humans and their livestock, the objectives of molecular epidemiology include the development of molecular tools, genotyping and gene expression, the incorporation of concepts and results of population genetics of infectious diseases, the integration of recent advances in theoretical epidemiology and evolutionary ecology of diseases, a better understanding of transmission for the development of risk factors analyses. This book will demonstrate how the latest developments in molecular tools and in epidemiology can be integrated with studies of host-pathogen interactions. Besides a strong theoretical component, there will also be an emphasis on applications in the fields of epidemiology, public health, veterinary medicine and health ecology. Students and researchers in the fields of epidemiology, animal and human health, evolutionary ecology, parasitology are the main potential readers of the book as well as a broader audience from veterinary medicine and conservation.

**Recent Advances in the Ecology and Evolution of the Bathyergidae** Stan Braude, Sabine Begall, Susanne Holtze, Nigel Bennett, 2022-11-14 Submissions will address new discoveries about the ecology and evolution of one or more bathyergid mole rat species. While some background

may be appropriate the focus should be on new or less widely known discoveries Naked mole rats may be included but will not be disproportionately represented Publisher's description viewed August 17 2023

**The Biogeography of Host-Parasite Interactions** Serge Morand, Boris R. Krasnov, 2010-07 This edited volume demonstrates how the latest developments in biogeography for example in phylogenetics macroecology and geographic information systems can be applied to studies in the evolutionary ecology of host parasite interactions in order to integrate spatial patterns with ecological theory

**Current Progress in Biological Research** Marina Silva-Opps, 2013-04-24 Current Progress in Biological Research presents new insights into key topics from different areas of the biological sciences Some of the topics covered in the book are antibiotic susceptibility genomic rearrangement historical biogeography biogeographic patterns endemism and the use of microorganisms for pest control The book is an interesting collection of 16 original research articles written by respected experts in their fields It is hoped that readers will be stimulated and challenged by the contents of this book

**Community Ecology** Gary G. Mittelbach, Brian J. McGill, 2019-05-24 Community ecology has undergone a transformation in recent years from a discipline largely focused on processes occurring within a local area to a discipline encompassing a much richer domain of study including the linkages between communities separated in space metacommunity dynamics niche and neutral theory the interplay between ecology and evolution eco evolutionary dynamics and the influence of historical and regional processes in shaping patterns of biodiversity To fully understand these new developments however students continue to need a strong foundation in the study of species interactions and how these interactions are assembled into food webs and other ecological networks This new edition fulfils the book's original aims both as a much needed up to date and accessible introduction to modern community ecology and in identifying the important questions that are yet to be answered This research driven textbook introduces state of the art community ecology to a new generation of students adopting reasoned and balanced perspectives on as yet unresolved issues Community Ecology is suitable for advanced undergraduates graduate students and researchers seeking a broad up to date coverage of ecological concepts at the community level

**Activity Patterns in Small Mammals** S. Halle, N.C. Stenseth, 2000-07-06 Environmental conditions change considerably in the course of 24 h with respect to abiotic factors and intra and interspecific interactions These changes result in limited time windows of opportunity for animal activities and hence the question of when to do what is subject to fitness maximisation This volume gives a current overview of theoretical considerations and empirical findings of

activity patterns in small mammals a group in which the energetic and ecological constraints are particularly severe and the diversity of activity patterns is particularly high Following a comparative ecological approach for the first time activity timing is consequently treated in terms of behavioural and evolutionary ecology providing the conceptual framework for chronoecology as a new subdiscipline within behavioural ecology An extensive Appendix gives an introduction to methods of activity modelling and to tools for statistical pattern analysis
