## Installation and Wiring

### CAUTION

- Do not touch the power supply or the operator terminal before starting the installation work or wiring and before mounting or removing the operator terminal.
- When the communication between the operator terminal and the PLC fails, it is impossible to operate the operator terminal. Therefore, emergency stops and other safety functions must not be controlled via the PLC.

### CAUTION

- Do not disassemble or modify the unit. Doing so can cause a failure, malfunction, injury or fire.
- Use the GOT in the environment that satisfies the general specifications described in the manual. Do not connect the operator terminal to an environment that involves high explosive risks, strong magnetic fields, direct sunlight or large ambient temperature changes.
- Never allow fluids, solid objects or wiring debris to enter any openings in the operator terminal. This may cause short-circuits and fire.

### Mounting

A GOT is designed to be installed into the front of a control cabinet or into a control panel.

When the temperature inside the control cabinet or control panel is 40 to 55 °C, the mounting angle should be in the range 10° to 85° degrees.

- Prepare a hole in the panel with the dimensions shown on the left from the GOT from the front of the panel or the control cabinet into the cut-out.

- Place the mounting flange (1) and the mounting flange (2) into the prepared openings of the GOT and tighten the screws and the GOT is fixed. Place one of four supplied mounting flanges and tighten the mounting screws with a torque of 0.5 to 0.8 N·m.

- After mounting, secure the protection film from the operator terminal display.

## Power Supply Wiring

### CAUTION

- Do not lay signal cables close to the main circuit, high voltage power lines, or load lines. Otherwise, effects of noise or surge induction are likely to take place. Keep a safe distance of more than 100 mm from the above other wiring.
- When connecting the power supply phase, confirm the rated voltage and the polarity. Not doing so can cause a fire or failure.

Connect the power supply to the power terminals on the back panel of the GOT.

Use the shortest cable possible (less than 2 m) to minimize the voltage drop and short-circuiting. Connect the cable to the power terminals. Tighten the terminal screws securely with a torque of 0.5 to 0.8 N·m. Use the commercially available terminals with plastic covers for connection of the power supply (see figure below).

### Grounding

Ground the GOT using the ground terminal at the lower left corner of the upper case terminal block in the figure at the top of this column.

- The grounding resistance should be 100 Ω or less.
- The grounding point should be close to the GOT. Keep the grounding wire as short as possible.
- The ground wire size should be at least 1 mm<sup>2</sup>.
- Independent grounding should be performed for best results. When independent grounding is not performed, perform "shared grounding" of the following figure.

### Connection to the Control System

The operator panel of the GOT2000 series can be connected not only to PLCs from Mitsubishi Electric but also to various other controllers (PC, or so) and to PLCs from third-party manufacturers and many other devices.
