Modern Multidimensional Scaling Ingwer Borg, Patrick Groenen, 2014-01-15 *Optimal Design and Related Areas in Optimization and Statistics* Luc Pronzato, Anatoly Zhigljavsky, 2010-07-25 The present volume is a collective monograph devoted to applications of the optimal design theory in optimization and statistics The chapters reflect the topics discussed at the workshop W Optimum Design and Related Statistical Issues that took place in Juan les Pins France in May 2005 The title of the workshop was chosen as a light hearted celebration of the work of Henry Wynn It was supported by the Laboratoire I3S CNRS Universit  de Nice Sophia Antipolis to which Henry is a frequent visitor The topics covered partly reflect the wide spectrum of Henry's research interests Algorithms for constructing optimal designs are discussed in Chap 1 where Henry's contribution to the field is acknowledged Steepest ascent algorithms used to construct optimal designs are very much related to general gradient algorithms for convex optimization In the last ten years a significant part of Henry's research was devoted to the

study of the asymptotic properties of such algorithms This topic is covered by Chaps 2 and 3 The work by Alessandra Giovagnoli concentrates on the use of majorization and stochastic ordering and Chap 4 is a hopeful renewal of their collaboration One of Henry's major recent interests is what is now called algebraic statistics the application of computational commutative algebra to statistics and he was partly responsible for introducing the experimental design sub area reviewed in Chap 5 One other sub area is the application to Bayesian networks and Chap 6 covers this with Chap 7 being strongly related

to the visual representation of data acquired from experiments As an expansion of these approaches it is also possible to include data examination generated by mathematical physical modeling Imaging Systems encompass any subject related to digital images from fundamental requirements for a correct image acquisition to computational algorithms that make it possible to obtain relevant information for image analysis In this context the book presents selected contributions of a special session at the Conference on Advanced Computational Engineering and Experimenting ACE X 2016 *Deterministic Global Optimization* Yaroslav D. Sergeyev, Dmitri E. Kvasov, 2017-06-16 This book begins with a concentrated introduction into deterministic global optimization and moves forward to present new original results from the authors who are well known experts in the field Multiextremal continuous problems that have an unknown structure with Lipschitz objective functions and functions having the first Lipschitz derivatives defined over hyperintervals are examined A class of algorithms using several Lipschitz constants is introduced which has its origins in the DIRECT Dividing RECTangles method This new class is based on an efficient strategy that is applied for the search domain partitioning In addition a survey on derivative free methods and methods using the first derivatives is given for both one dimensional and multi dimensional cases Non smooth and smooth minorants and acceleration techniques that can speed up several classes of global optimization methods with examples of applications and problems arising in numerical testing of global optimization algorithms are discussed Theoretical considerations are illustrated through engineering applications Extensive numerical testing of algorithms described in this book stretches the likelihood of establishing a link between mathematicians and practitioners The authors conclude by describing applications and a generator of random classes of test functions with known local and global minima that is used in more than 40 countries of the world This title serves as a starting point for students researchers engineers and other professionals in operations research management science computer science engineering economics environmental sciences industrial and applied mathematics to obtain an overview of deterministic global optimization
